BIOTECHNOLOGY AND ITS APPLICATIONS

BIOLOGY

Single Correct Answer Type

1.	First hormone prepared	by genetic engineering is:			
	a) Insulin	b) Oxytocin	c) Adrenaline	d) Somatotropin	
2.	Retroviruses in animals		to change normal cells into		
	a) Germ cell	b) Cancerous cells	c) Cosmid	d) Vector	
3.		•	e of following sequence is		
	5' - G - T - C - G - A -				
	3' - C - A - G - C - T -	- G – 5'			
	a) <i>Alu</i> I	b) <i>Bam</i> HI	c) <i>Hind</i> II	d) <i>Eco</i> RI	
4.	-	ificial cloning vector devel	oped inA byB and .	C from <i>E. coli</i> plasmid.	
	Here A, B and C can be)	
	a) A-1976, B-Boliver, C-F	=	b) A-1975, B-Tiselius, C-	-	
	c) A-1977, B-Boliver, C-F	•	d) A-1978, B-HO Smith,		
5.			ganism can be done through		
	a) Genetic engineering	b) Tissue culture	c) Transformation	d) None of these	
6.	_	that triggers transcription			
	a) Depressor	b) Inducer	c) Regulator	d) Controlling element	
7.	Recombinant DNA have				
	a) Antibiotic resistant gene			b) Diseases resistant gene	
•	c) Allergy resistant gene		d) All of these		
8.	-	lucing plasmid (Ti) of <i>Agr</i>	obacterium tumefaciens i	s used as a cloning vector.	
	This statement is	474,7			
	a) True		b) False		
0	c) Sometimes (a) and so		d) Neither (a) nor (b)	1: - T 1: 11 -1 1 -1	
9.				red into <i>E. coli</i> cell, the host	
			The ampicillin resistant gene		
10	a) Vectors	b) Plasmid ephalopathy disease is equ	c) Selectable marker	d) Cloning sites	
10.		ephalopathy disease is equ	b) Parkinson's disease		
	a) Kala Azarc) Creutzfeldt-Jacob dise	2200	d) None of the above		
11	,	that is used to find compl			
11.	a) Vector	b) Plasmid	c) DNA probe	d) Recombinant DNA	
12	Proteins are removed by	•	c) DIVA probe	d) Recombinant DNA	
14.	a) Ribonuclease	b) Chitinase	c) Cellulase	d) Protease	
13		•	the vector in genetic engin		
13.	a) It is resistant to antibi		b) It is resistant to restri	•	
~	c) Its ability to carry a foreign gene		d) Its ability to cause infection in the host		
14.		opy numbers of the linked		ection in the nost	
			acycline resistance gene in	the vector pBR322, the	
			nce due to insertion of forei		
	Choose regarding the ab			J	
	a) I is true, II is false	b) II is true, I is false	c) Both are true	d) Both are false	
15.	•	=	of genotype, introducing so	•	
•	phenomenon is called:	1	5 71 / 222 8000	5 5 3,1 4	

- a) Tissue culture
- b) Biotechnology
- c) Genetic engineering
- d) Immunisation
- 16. Many copies of a DNA molecule in a test tube are produced by:
 - a) Polymerase chain reaction (PCR)
- b) Molecular chain reaction (MCR)
- c) Ephemeral chain reaction (ECR)
- d) All of them
- 17. Producing a 'giant mouse' in the laboratory was possible through:
 - a) Gene mutation
- b) Gene duplication
- c) Gene synthesis
- d) Gene manipulation

- 18. Downstream process includes
 - I. Separation of the product from the reactor
 - II. Purification of the product
 - III. Formation of the product with suitable preservatives
 - IV. Quality control testing and clinical trials in case of drugs

Which of the statements given above are correct?

- a) I, II and III
- b) I, II and IV
- c) II, III and IV
- d) I, II, III and IV

- 19. More advancement in genetic engineering is due to
 - a) Restriction endonuclease

b) Reverse transcription

c) Protease

- d) Zymase
- 20. Plasmid are suitable vectors for gene cloning because
 - a) These are small circular DNA molecules, which can integrate with host chromosomal DNA
 - b) These are small circular DNA molecules with their own replication origin site
 - c) These can shuttle between prokaryotic and eukaryotic cells
 - d) These often carry antibiotic resistance genes
- 21. Polymerase chain reaction is useful in
 - a) DNA synthesis

b) DNA amplification

c) Protein synthesis

- d) Amino acid synthesis
- 22. Study the following diagram and identify *A*, *B* and *C*

- a) A-Taq polymerase, B-Denaturation at 94°C, C-Primer
- b) A-Denaturation at 94°C, B-Taq polymerase, C-Primer
- c) A-Primer, B-Denaturation at 94°C, C-Taq polymerase
- d) A-Taq polymerase, B-Extension, C-Transformation
- 23. A bioreactor is
 - a) Hybridoma

- b) Culture containing radioactive isotopes
- c) Culture for synthesis of new chemicals
- d) Fermentation tank
- 24. Which of the following techniques can be used to detect genetic disorders in human?
 - a) Polymerase Chain Reaction (PCR)
- b) Gel electrophoresis

c) Spectroscopy

- d) All of the above
- 25. Special sequence in the DNA recognized by restriction endonuclease is called
 - a) Restriction nucleotide sequence

- b) Palindromic nucleotide sequence
- c) Recognition nucleotide sequence
- d) All of the above

- 26. Primers are
 - a) Small chemically synthesized oligonucleotides of about 10-18 nucleotides that are complementary to the region of template DNA
 - b) Chemically synthesized oligonucleotides of about 10-18 nucleotides that are not complementary to the region of template DNA
 - c) The double-stranded DNA that need to the amplified

	d) Specific sequences present on recombinant DNA				
27.	This method of finding a gene is used when researchers very little about the gene they are trying to find.				
	This process results in a complete gene library: a collection of copies of DNA fragments that represent the				
	entire genome of an organism. Identify the method				
	a) Cloning b) Shotgun cloning	c) Gene synthesis	d) Cloning		
28.	Consider the following statement about PCR				
	I. Polymerase Chain Reaction (PCR) is a technique o	f synthesizing multiple co	pies of the desired gene in		
	vitro				
	II. This technique was developed by Kary Mullis in 1	.985			
	III. A single PCR amplification cycle involves three b		nnealing and extension		
	Which of the statement given above are correct?	•	G		
	a) I and II b) I and III	c) II and III	d) I, II and III		
29.	A somatic plant cell has potential to develop into a f				
	a) Totipotency b) Gene cloning	c) Tissue culture	d) Regeneration		
30.	Ori is a DNA sequence that is responsible for initiati	•	, ,		
	a) True	b) False			
	c) Sometimes (a) and sometimes (b)	d) Neither (a) nor (b)			
31.	Plasmids are autonomously replicating circular extr	. , . , .	statement is		
01.	a) True	b) False			
	c) Sometimes (a) and sometimes (b)	d) Neither (a) nor (b)			
32	Genetic engineering is possible because:	a) werener (a) nor (b)			
02.	a) The phenomenon of transduction in bacteria is w	rell understood			
	b) We can see DNA by electron microscope	cii diidei stood			
	c) We can cut DNA at specific sites by endonuclease	s like DNA ase I			
	d) Restriction endonucleases purified form bacteria				
33	A single PCR amplification cycle involves	can be asea in vicio			
00.	a) Denaturation b) Annealing	c) Extension	d) All of these		
34	DNA fingerprinting is related to:	cy Entendion	a) in or these		
.	a) Molecular analysis of profiles of DNA samples				
	b) Analysis of DNA samples using imprinting device	S			
	c) Techniques used for molecular analysis of different				
	d) Techniques used in identification of fingerprints				
35.	, , ,	· · · · · · · · · · · · · · · · · · ·			
	a) The double helix	b) Errors in base sequen	ce		
	c) Polymorphism in sequence	d) DNA replication			
36.	In genetic engineering, the terms vector is applied for				
	a) Plasmid b) Sources of DNA	c) Cell which receives	d) Virus		
37.		.,			
	a) Nucleoids b) Chromosomes	c) Mesosomes	d) Plasmid		
38.					
	is one of the following		9 4		
	a) Directed sequencing of BAC counting	b) Random shotgun sequ	iencing		
	c) Electrophoresis	d) Southern blotting			
39.		,	<i>li</i> were isolated. One was		
	methylase and other was restriction endonuclease.				
	a) Protection of host DNA from the action of restrict	=			
	two bases usually with in the sequence recognize		-0our) . 91 out to one of		
	b) Able to ligate the two cohesive ends of DNA mole	-			
	c) Able to remove the methyl group and hence, prev		n endonuclease on host DNA		
	d) Able to cut the DNA of bacteriophage at specific s				
40.			NA molecules are called		

- a) Primer b) STRs c) RFLPs d) Probes
- 41. Which of the following enzyme is used in genetic engineering?
 - a) Translocase

b) Topoisomerase

c) DNAse

- d) Restriction endonuclease
- 42. The below diagram refer to PCR. Identify the steps *A*, *B* and *C* and select the correct option

- A-Denaturation of 94-96°C, B-Annealing of 40-60°C, C-Extension through taq polymerase at 72°C, D-Amplified
- A-Annealing of 94-96°C, B-Denaturation of 40-60°C, C-Extension through taq polymerase at 72°C, D-Amplified
- A-Extension through taq polymerase at 40-60°C, B-Amplified, C-Denaturation of 40-60°C, D-Annealing of 94-96°C
- A-Annealing, B-Extension through *taq* polymerase at 40-60°C, C-Denaturation of 94-96°C, D-Annealing of 40-60°C
- 43. The controlled use of biological agents, such as microorganism, plants or animal cell, for beneficial use is called
 - a) Biochemistry
- b) Molecular biology
- c) Biotechnology
- d) Microbiology

- 44. Humulin is a:
 - a) Pig insulin
- b) Human insulin
- c) Viral insulin
- d) Human clone

- 45. Find the incorrect statement:
 - a) Gene therapy is a genetic engineering technique used to treat disease at molecular level by replacing defective genes with normal genes
 - b) Calcitonin is a medically useful recombinant product in the treatment of infertility
 - c) Bt toxin is a biodegradable insecticide obtained from Bacillus thuringiensis
 - d) Trichoderma sp. is a biocontrol agent for fungal diseases of plants
- 46. Plasmids are extrachromosomal circular DNA molecules:
 - a) Which have their own point of replication and can replicate independently
 - b) Which have their own point of replication but cannot replicate independently
 - c) Which do not have their own point of replication and cannot replicate independent of bacterial of bacterial chromosomal DNA
 - d) None of the above
- 47. The genome map was produced under human genome project in:
 - a) 1992

- b) 1994
- c) 1996

d) 2000

- 48. Term hybridoma implies:
 - a) DNA-RNA hybrid

b) Recombination of DNA molecules

c) Somatic hybridisation

- d) Genetic fusion
- 49. Which of the following is a difficulty in getting prokaryotic cells to express eukaryotic genes?
 - a) The signals that control gene expression are different and prokaryotic promoter regions must be added to the vector
 - b) The genetic code differs between the two because prokaryotes substitute the base uracil for thymine

- c) Prokaryotic cells cannot transcribe introns because their genes do not have them
- d) The ribosomes of prokaryotes are not large enough to handle long eukaryotic genes
- 50. In transgenics, the expression of transgene in the target tissue is known by:
 - a) Enhancer
- b) Transgene
- c) Promoter
- d) Reporter
- 51. Identify A, B, C and D in the given diagram of E. coli cloning vector pBR322

- a) A-Eco RI, B-Bam HI, C-Ori, D- amp^R
- b) A- amp^R, B- Ori, C-Bam HI, D-Eco RI
- c) A-*Ori*, B-*Bam* HI, C-*Eco* RI, D-*amp* R
- d) A-Bam HI, B-Eco RI, C-ampR, D-Ori

- 52. Consider the following statements
 - I. In microinjection method foreign DNA is directly injected into the nucleus of animal cell or plant cell by using micro needles or micro pipettes
 - II. Microinjection method is used in oocytes, eggs and embryo
 - III. Electroporation is the formation of temporary pores in the plasma membrane of host cell by using lysozyme or calcium chloride
 - IV. In chemical mediated gene transfer method certain chemicals such as ${\rm CO_2}$ help foreign DNA to enter the host cell

Which of the statements given above are correct?

- a) I and II
- b) I, II and III
- c) II, III and IV
- d) I, II, III and IV
- 53. The construction of the first recombinant DNA was done by using the native plasmid of:
 - a) E. coli

b) Salmonella typhimurium d) Yeast

- c) B. thuringiensis
- 54. Gene amplification using primers can be done by
 - a) Microinjection

b) ELISA

c) Polymerase chain reaction

- d) Gene gun
- 55. Polyethylene glycol method is used for
 - a) Biodiesel production

- b) Seedless fruit production
- c) Energy production from sewage
- d) Gene transfer without a vector
- 56. The enzymes, commonly used in genetic engineering are
 - a) Restriction endonuclease and polymerase
- b) Endonuclease and ligase
- c) Restriction endonuclease and ligase
- d) Ligase and polymerase
- 57. Which one of the following techniques had helped to solve many mysteries involving murders, robberies and rapes?
 - a) Gene splicing

b) Computer technology

c) DNA fingerprinting

d) Gene cloning

- 58. Consider the following statements
 - I. Recombinant DNA technology popularly known as genetic engineering is a stream of biotechnology which deals with the manipulation of genetic material by man *in vitro*
 - II. pBR322 is the first artificial cloning vector developed in 1977 by Boliver and Rodriquez from *E. coli* plasmid
 - III. Restriction enzymes belongs to a class of enzymes called nucleases

Which of the statements given above are correct?

- a) I and II
- b) I and III
- c) II and III
- d) I, II and III

59. What is C-DNA?

	a) Circular DNA b) Cloned DNA		
	c) DNA produced from reverse transcription of RNA d) Cytoplasmic DNA		
60.	PCR was developed byA inB and for this he	received Nobel Prize for c	hemistry inC Here A, B
	and C can be recognized as A B C		
	a) Kary Mulllis 1990 1997	b) Flemming 1985 1	002
	c) Kary Mullis 1985 1993	d) Flemming 1985 1	
61	Cutting of a piece of DNA from a plasmid was done v	,	
01.	B Here A and B can be	vitil the help ofA elizy	ines, popularly known as
	a) A-Tu ligases; B-Molecular glu	b) A-Restriction enzyme	e R-Molecular scissors
	c) A-Joining enzyme; B-Molecular glu	= =	B-Synthesising enzymes
62	In a genetic engineering experiment, restriction enz	= =	b-synthesising enzymes
02.	a) Bacterial DNA only	b) Viral DNA only	
	c) Any DNA fragment	d) Eukaryotic DNA only	
63	The components of a bioreactor are	a) Lakaryotic Divironiy	
00.	I. an agitator system		
	II. an oxygen delivery system		
	III. foam control system		
	IV. temperature control system		
	V. pH control system		
	VI. sampling ports to with draw cultures periodically	V	
	Choose the correct option	,	
	a) I, II, III, IV and V b) II, IV, V and VI	c) I, II, III, IV and VI	d) All of these
64.	The minimum length of cistron in base pairs which s	synthesizes a polypeptide	•
	a) 50 bp b) 100 bp	c) 150 bp	d) 200 bp
65.	I. DNA being a hydrophilic molecule cannot pass thr	ough cell membranes	
	II. The bacteria should be made competent to accept	the DNA molecule	
	The correct option regarding the above statements i	S	
	a) I is true, but II is false	b) II is true, but I is false	
	c) I and II are true	d) I and III are false	
66.	In cloning plasmid pBR322		
	p stands forA		
	B stands forB		
	R stands forC		
	Choose the correct option		
	a) A-plasmid, B-Boliver, C-Rodriquez	b) A-plasmid, B-bacteria	-
	c) A-prophage, B-bacteriophage, C-Rodriquez	d) A-prophage, B-Bolive	<u>-</u>
67.		A profiling technique is t	to be used for identifying the
	criminal, which of the following is ideal for use?		12.70
60	a) Serum b) Erythrocytes	c) Leucocytes	d) Platelets
68.	The Ti plasmid used in genetic engineering is obtain		
	a) Bacillus thuringeinsis	b) Agrobacterium rhizo	ogenes
6 0	c) Agrobacterium tumifaciens	d) Escherichia coli	a vala of these proteins in the
09.	Who got the Nobel prize in medicine for their discoverells:	rery or G-proteins and the	e role of these proteins in the
	a) Robert and Philip Sharp	b) Gilman and Rodbell	
	c) Fischer and Krebs	d) Ervin Nahar and Bert	Sakmann
70	Which of the following is required to perform polym		Jamilaini
, 0.	I. DNA template	icrase cham reaction:	

	II. Primer			
	III. Taq polymerase and ı	vent polymerase		
	Choose the correct option	1		
	a) I, II and III	b) I and II	c) II and III	d) II and III
71.	The basis for DNA fingery			.,
	a) Occurrence of restricti	-	vmornhism (RFLP)	
	b) Phenotypic differences		ymorphism (Ri Ei)	
	c) Availability of cloned I			
	d) Knowledge of human k			
72.		,	f interest, is transferred to the l	· ·
	Consider the following fo	ur agents (I-IV) in this	regard and select the correct o _l	ption about which one or
	more of these can be used	d as a vector/vectors		
	I. Bacterium			
	II. Plasmid			
	III. Plasmodium			
	IV. Bacteriophage			
	a) I, II and IV	b) I only	c) I and III	d) II and IV
73	•	•	organism can be done through	•
75.	a) Genetic engineering	= = =	c) Transformation	d) None of these
74		=	•	•
/4.		aq and vent isolated	from thermophilic bacteria are	2
	a) DNA polymerase		b) DNA ligases	
	c) Restriction endonuclea		d) RNA polymerases	
75.	-	-	able to select a transformed cell	l in the presence of
	chloramphenicol. The chl	oramphenicol resistant	ce gene in this case is called	
	a) Origin of replication		b) Selectable marker	
	c) Cloning sites		d) Insertional inactivation	n
76.	GAATTC is the recognitio	n site for the restriction	n endonuclease	
	a) <i>Eco</i> RI	b) <i>Hind</i> II	c) <i>Eco</i> RII	d) <i>Bam</i> HI
77.	Plasmid is			
	a) An autonomously repl	icating circular extrach	romosomal DNA	
	b) An autonomously repl	icating circular extrach	romosomal RNA	
	c) An circular protein mo	=		
	d) An autonomously repl		NA	
78.	The polymerase chain rea	_		
	a) <i>In vivo</i> replication of D			
	b) <i>In vivo</i> synthesis of <i>m</i> F			
	c) <i>In vitro</i> synthesis of <i>m</i>			
	-		using thermostable DNA polym	erase
79	Yeast has become import			iciase
, ,.	a) Has plasmids that can			
	b) Allows the study of eul		n and expression	
	c) Grows readily and rap	idly in the laboratory		
00	d) All of the above	1 1 1	C	
80.	The genome of <i>Caenorha</i>			1 6 000
	a) 3 billion base pairs and	_	b) 12 million base pairs a	_
	c) 4.7 million base pairs a		d) 97 million base pairs a	nd 18,000 genes
81.	Two bacteria found to be	very useful in genetic e	engineering experiments are:	
	a) Nitrosomonas and Kl	ebsiella	b) Escherichia and Agro	bacterium
	c) Nitrobacter and Azot	obacter	d) Rhizobium and Diploc	coccus
82.	Gel electrophoresis is use	ed for:		
	a) Isolation of DNA molec	cule		

	b) Cutting of DNA into fragments					
	c) Separation of DNA fragments according to their size					
	d) Construction of recombinant DNA by joining with	_				
83.	Then linking of antibiotic resistance gene with the p	lasmid vector became poss	ible with:			
	a) DNA ligase b) Exonucleases	c) Endonucleases	d) DNA polymerase			
84.	Restriction endonucleases are:					
	a) Present in mammalian cell for degradation of DN	A when the cell dies				
	b) Synthesized by bacteria as part of their defence n	nechanism				
	c) Used for in vitro DNA synthesis					
	d) Both (B) and (C)					
85.	Which one of the following is related with genetic en	ngineering?				
	a) Plasmids b) Mitochondria	c) Mutations	d) Ribosomes			
86.	Enzyme that is used in PCR technology is	,				
	a) Ligase	b) Polymerase				
	c) Helicase	d) Reverse transcriptase				
87.		, p				
07.	a) Detects only mutant and normal alleles					
	b) Can be done only on eggs or sperms					
	c) Involves hybridization to ribosomal RNA					
	d) Utilizes restriction enzymes and a polymorphic s	ite				
88	An enzyme catalyzing the removal of nucleotides fro					
00.	a) Endonuclease b) Exonuclease	c) DNA ligase	d) <i>Hind</i> II			
89	Inducible/lac operon system operates in:	c) Divilinguse	a) Illia ii			
07.	a) Catabolic pathway	b) Anabolic pathway				
	c) Intermediate metabolism	d) All the above				
90	Polymerase Chain Reaction (PCR) needs	d) All the above				
70.	a) DNA template b) Primers	c) <i>Taq</i> polymerase	d) All of these			
01	Consider the following statements	c) ray polymerase	u) All of these			
71.	I. A soil inhabiting plant bacterium, <i>Agrobacterium</i>	tuma facione a nathogen	of cavaral digat plants is			
	able to transfer a piece of DNA known as T-DNA	tumej uciens, a patnogen t	of several dicot plants is			
	II. The T-DNA causes tumours					
	III. Tumour formation induced by Ti-plasmid					
	Which of the statements given above are correct?					
	<u> </u>	a) II and III	d) I II and III			
02	a) I and II Boatriction and any alegaes are any mag which	c) II and III	d) I, II and III			
92.	Restriction endonucleases are enzymes which a) Make cuts at specific positions within the DNA m	ologulo				
	b) Recognize a specific nucleotide sequence for bind					
		= =				
	c) Restrict the action of the enzyme DNA polymeras					
02	d) Remove nucleotides from the ends of the DNA me	Diecuie				
93.	Restriction enzymes are used to cut	h) Daulda atuan da d DNA				
	a) Single-stranded RNA	b) Double-stranded DNA				
0.4	c) Single-stranded DNA	d) Double-stranded RNA				
94.	Restriction enzymes are isolated chiefly from:	.) D	D.D L			
0.5	a) Algae b) Fungi	c) Protozoans	d) Prokaryotes			
95.	Which of the following is correctly matched?	15 m				
	a) <i>Agrobacterium tumefaciens</i> – Tumour	b) <i>Thermus aquaticus – B</i>	-			
	c) pBR322 – Enzyme	d) Ligase – Molecular scis				
96.	The Polymerase Chain Reaction (PCR) is a reaction	in which amplification of sp	ecific DNA sequences is			
	carried out <i>in vitro</i> . This statement is					
	a) True	b) False				
	c) Sometimes (a) and sometimes (b)	d) Neither (a) nor (b)				

97	The total number of nitroge	moue hacee in human ger	oma is astimated to be abo	uit.			
97.	_	o) 3.1 billion	c) 3.5 million	d) 35 thousand			
98	Totipotency in cell is:) 3.1 billion	c) 5.5 million	a) 55 tilousalla			
<i>7</i> 0.	a) Flower in a culture media	ıım					
	b) Development of fruit from		edium				
	c) Development of an organism from cell in culture medium						
	d) Development of all tissue						
99.	Restriction enzymes was dis						
	a) Alexander Flemming	,	b) Waksman				
	c) Berg		d) Smith, Nathan and Arbo	er			
100	. Identify the plasmid:		,				
		o) Hind III	c) Eco RI	d) pBR 322			
101	. Consider the following state	•	,	<i>7</i> 1			
	I. Bioreactors are vessels of		raw materials are biologic	ally converted into specific			
	products	O	O .	J			
	II. One of the most common	ly used bioreactors is of s	stirring type				
	III. Shake flasks are used for			all scale in the laboratory			
	IV. A large scale production			-			
	a) I and II b	o) I and III	c) I, II and III	d) I, II, III and IV			
102	. The term 'Biotechnology' w	as given by					
	a) Craig Venter	o) Robert Edward	c) Karl Erkey	d) Temin and Baltimore			
103	. A collection of organisms, u	sually viruses, bacteria o	r yeast, which have been tra	ansformed by the addition			
	of extra genes from another	· species:					
	a) Gene replication	o) Gene cloning	c) Gene pool	d) Gene library			
104	. Exonucleases cleaving nucle	eotides one at a time fron	n the end of the polynucleo	tide chain are:			
	a) Specific for 5' end of RNA	A strand					
	b) Specific for 3' end of RNA	A strand					
	c) Specific for both 5' and 3'	' ends of nucleotide stran	ds				
	d) Non-specific for 5' and 3'						
105	. The genetic recombinants o			e is called:			
		o) Phasmid	c) Phagmid	d) Foreign DNA			
106	. Which of the following state						
	a) In the historic cloning ex	_	-	as taken from an udder cell			
	b) Mammalian characters a		S				
	c) Heart of mammals is inca						
	d) Pyramid of biomass is up						
107	. Which of the following state						
	I. DNA being a hydrophilic n	=	-	m. 1 .1 1.1			
	II. Agrobacterium tumefac	-		•			
	transforms normal plant cel	=		=			
	III. Retrovirus, adenovirus, j	= =	ow used as cloning vectors	in animal because of their			
	ability to transform normal						
	IV. In genetic engineering, D		es are cut with the same res	striction enzymes so that			
	both DNA fragments have sa	ame kind of sticky ends					
	Choose the correct option		-) 0 -1 111	D O .1 IV			
100	•	o) Only II	c) Only III	d) Only IV			
τηΩ	. Which one of the following	= =		anotic Engineering			
	a) RNA polymerase -RNA pic) Central Dogma-codon	imei	b) Restriction enzymes-Ged) Okazaki fragments-spli				
100	. Bam HI, Eco RI, Sma H are tl	ha types of	uj Okazaki iragillelits-Spli	ung			
107	a) Restriction endooxidases	= =	b) Restriction endonuclea	292			
	a, resuredon endoundases	,	by resuredon chaomacica	.000			

	c) Restriction exonucleases		d) Restriction polymerase	es
110.	PCR technique was invented by			
	a) Boyer b) Kar	y Mullis	c) Cohen	d) Sanger
111.	. Somaclonal variation can be obta	ined by:		
	a) Hybridization		b) Tissue culture	
	c) Application of colchicine		d) Irradiation with gamm	a rays
112.	. Ability to absorb foreign DNA is:			
	a) Sexduction b) Cor	npetence	c) Hfr	d) Transduction
113.	. Which of the following is specific	ally used in genetic	engineering?	
	a) Ligase		b) Gyrase	
	c) DNA polymerase		d) Restriction endonuclea	ase
114.	The tumour inducing capacity	of Agrobacterium	tumefaciens is located	in large extrachromosomal
	plasmids called			
	a) Ri-plasmid b) Lan	nbda phage	c) pBR322	d) Ti-plasmid
115.	. Who discovered recombinant DN	(A(rDNA) technolog	gy?	
	a) Har Gobind Khorana		b) James D Watson	
	c) Stanley Cohen and Herber Boy	ver .	d) Walter Sutton and Ave	ry
116.	. Which of the following is used in	recombinant DNA t	echnique?	
	a) Cell wall of virus		b) Gene which produces of	capsid of virus
	c) Virus		d) Capsid of virus	
117.	. There are special proteins that h	elp to open up DNA	double helix infront of the	replication fork. These
	proteins are:			
	a) DNA gyrase b) DN	A polymerase I	c) DNA ligase	d) DNA topoisomerase
118.	. Agarose extracted from sea weed	ls finds use in:		
	a) Spectrophotometry		b) Tissue culture	
	c) Gel electrophoresis		d) PCR	
119.	. For selectable marker.			
	I. It helps to select the host cells v	which contain the ve	ector and eliminate the nor	n transformants
	II. Genes encoding resistance to a	ntibiotics like ampi	cillin, chloramphenicol, tet	racycline or kanamycin, are
	useful selectable markers for E . c	oli		
	Which of the statements given ab	ove are correct?		
	a) Only I b) Onl	y II	c) I and II	d) None of these
120.	. The first clone animal of the wor	d is:		
	a) Molly sheep b) Pol	ly sheep	c) Dolly sheep	d) Molly goat
121.	. Common bacterium used in gene			
	a) E. coli b) Dip	lococcus	c) Rhizobium	d) <i>Spirillium</i>
122.	. Who discovered that restriction o	-		ands in a particular
	fashion, which left what has beca	me known as 'sticky	y ends' on the strands?	
		nley Cohen	c) Herbert Boyer	d) James D Watson
123.	. A restriction fragment containing	g a specific gene of i	nterest can be identified by	y gel electrophoresis
	followed by transferring the DNA	to a membrane as	- -	ig a procedure called
	a) An allozyme		b) A southern blot	
	c) Identification of a gene		d) A restriction fragment	length polymorphism
124.	. About gene gun method			
	I. This method is also known as b	-		
	II. In this method cells are bomba	orded with high velo	ocity micro-particles of gold	d or tungsten coated with
	DNA in plants			
	III. Important crop plants like ma		have now been transforme	ed by this method
	Which of the statements given ab			
	a) I and II b) I an		c) II and III	d) I, II and III
125.	. Identify the correct match for the	given diagram		

- a) Electrophoresis Migration of undigested and digested set of DNA fragments
- b) Bioreactor Raw materials are biologically converted into specific products
- c) Microinjection Technique of introducing foreign genes into a host cell
- d) Gene cloning Technique of obtaining identical copies of a particular DNA segment
- 126. In DNA fingerprinting which of the following is true?
 - a) VNTR is used as probes
 - b) Specific metabolic genes are used as probes
 - c) House keeping or luxury genes are use as probes
 - d) All of the above
- 127. The message from nuclear DNA for the synthesis of specific cytoplasmic protein is carried by:
 - a) mRNA
- b) t-RNA
- c) s-RNA
- d) r-RNA
- 128. The recent techniques used for separating fragments of DNA is:
 - a) Northern blotting
- b) Southern blotting
- c) Eastern blotting
- d) Western blotting
- 129. The flowchart given below represent the process of recombinant technology. Identify A and D

- a) A-Restriction endonuclease, B-Restriction exonuclease, C-RNA ligase, D-Transformation
- b) A-Restriction endonuclease, B-Restriction endonuclease, C-DNA ligase, D-Transformation
- c) A-Restriction exonuclease, B-Restriction endonuclease, C-DNA polymerase, D-Transduction
- d) A-Restriction endonuclease, B-Restriction endonuclease, C-DNA polymerase, D-Transformation
- 130. RNA is removed by the treatment with
 - a) Ribonuclease
- b) Protease
- c) Chitinase
- d) Cellulase
- 131. Which one of the following scientists developed the process of DNA fingerprinting?
 - a) Kary B. Mullis
- b) T.H. Morgan
- c) H.O. Smith
- d) Alec Jeffreys
- 132. Which of the following statement is not correct regarding *Eco* RI restriction endonuclease enzyme?
 - I. Eco. RI restriction endonuclease enzyme is isolated from Escherichia coli RY13
 - II. Its recognition sequence is 5'-GAATTC 3'

$$3'$$
-CTTAAG - $5'$
 \downarrow
 $5'$ - G - A - A - T - T - C - $3'$

III. Its site of cleavage is

- a) I and II
- b) I and III

	c) I, II and III		
	d) None of the above		
133.	Process of formation of RNA from DNA is called		
	a) Transduction b) Transcription	c) Transformation	d) Translation
134.	Which of the following would not be used in preparin	ng recombinant DNA?	
	a) Plasmids	b) Phages	
	c) Restriction enzymes	d) DNA polymerase III	
135.	Which one of the following bacteria has found extens	sive use in genetic engineer	ing work in plants?
	a) Agrobacterium tumefaciens	b) Clostridium septicum	
	c) Xanthomonas citri	d) Bacillus coagulens	
136.	Which of the following components are used in gel el	ectrophoresis?	
	I. Ethidium bromide		
	II. Restriction endonuclease		
	III. Agarose		
	IV. UV radiation		
	Choose the correct option		
	a) I and II b) I and III	c) I, II and IV	d) I, II, III and IV
137.	What is the first step in Southern Blotting technique?	•	
	a) Isolation of DNA from a nucleated cell such as the	one from the scene of crim	e
	b) Denaturation of DNA on the gel for hybridization v	with specific probe	
	c) Production of group of genetically identical cells		
	d) Digestion of DNA by restriction enzyme		
138.	The most thoroughly studied of the known bacteria-	plant interaction is the:	
	a) Plant growth simulation by phosphate-solubilising	g bacteria	
	b) Cyanobacterial symbiosis with some aquatic ferns		
	c) Gall formation on certain angiosperms by Agrobac	cterium	
	d) Nodulation of Sesbania stems by nitrogen fixing ba	acteria	
139.	Microorganisms can be grown in the bioreactor by		
	a) Support growth system	b) Agitated growth system	1
	c) Suspended growth system	d) Both (a) and (b)	
140.	In Northern blotting RNAs are separated by gel elect	rophoresis and the RNA ba	nds are transferred onto a
	membrane of:		
	a) Diazobenzyl oxymethyl	b) Diazobenzene	
	c) Diazobromine	d) None of the above	
141.	Which one of the following is commonly used in tran	sfer of foreign DNA into cro	op plants?
	a) <i>Trichoderma harzianum</i>	b) Meloidogyne incognitia	1
	c) Agrobacterium tumefaciens	d) Penicillium expansum	
142.	Which one among the following is just a cloning plass	mid not an expression plas	mid?
	a) pBAD-18-Cam b) pBCSK	c) pUC 18	d) pET
143.	There A are the DNA molecules that can carry a for $\ensuremath{^{\circ}}$	oreignB segment into tl	ne host cell.
	Here A and B refers to		
	A B		
	a) Vector RNA	b) Vector DNA	
	c) Gene RNA	d) Gene DNA	
144.	Probes, used in DNA fingerprinting are initially		
	a) Single-stranded RNA	b) Mini satellite	
	c) 19 base long oligonucleotides	d) All of the above	
145.	Application of PCR are		
	I. detection of pathogens		
	II. diagnosis of specific mutation		
	III. DNA fingerprinting		

	Choose the correct option	l		
	a) I and II	b) I and III	c) II and III	d) I, II and III
146	. A clone of sheep Dolly has	=		
	a) Gene transfer	J	b) Somatic cell cloning	
	c) Nucleus transfer		d) Germinal cell cloning	
147	=	c engineering is obtained f		
	a) <i>Bacillus thuringiensis</i>	o ongoog .o ooou .	b) <i>Agrobacterium rhizoge</i>	enes
	c) Agrobacterium tumefa	ciens	d) <i>Psedomonas syringae</i>	
148		the construction of a recom		
110		diester bond between two		
		bonds between sticky end	=	
	c) Ligation of all purine a		is of bivit fragments	
	d) None of the above	na pyrinname bases		
1/0		roduced by injecting foreig	n gono into tho	
147	= -	oduced by injecting foreig	b) Nucleus of unfertilized	ogg
	a) Egg		•	egg
150	c) Nucleus of fertilized eg	=	d) Nucleus of sperm	
150	Clonal cell lines can be ob			D.C.II for all a sall a
1 - 1	a) Autoradiography	b) Tissue culture	c) Centrifugation	d) Cell fractionation
151	Electroporation procedur		1	
			m elements with the help o	f electric stimulation
b) Opening of stomatal pores during night by artificial light				
	= =	s in the cell membrane to ir	-	
	=	rater with the help of a mer		
152	=	associated with genetic eng	=	
	a) Plastids	b) Plasmids	c) Mutations	d) Hybrid vigour
153	Biolistics (gene gun) is su			
	a) Disarming pathogen ve		b) Transformation of plan	its cells
	c) Construction recombin	ant DNA by joining with	d) DNA fingerprinting	
	vectors			
154	Which of the following sta	atements are correct for the	e enzyme <i>taq</i> polymerases?	?
	I. <i>Taq</i> polymerase is there	nally unstable		
	II. It requires primers for	carrying out the process of	fpolymerization	
	III. <i>Taq</i> polymerase is isol	ated from thermophilic ba	cterium, Thermus aquatic	us
	Choose the correct option	I		
	a) I and II	b) I and III	c) II and III	d) I, II and III
155	. EFB stands for			
	a) European Federation o	f Biotechnology	b) Eurasian Federation of	Biotechnology
	c) East Asia Federation of	Biotechnology	d) Ethiopian Federation o	f Biotechnology
156	The commonly used DNA	fingerprinting technique in	n forensic studies is simply	a method involving
	a) Southern blotting	b) Northern blotting	c) Eastern blotting	d) Western blotting
157	Cry I endotoxins obtained	d from Bacillus thruigiens	sis are effective against	
	a) Nematodes	b) Bollworms	c) Mosquitoes	d) Flies
158	In the naming of restriction	on enzymes the first letter i	is derived fromA name	and next two letters from
	theB and fourth letter	fromC ofD where	the enzymes are extracted	
	A to D in the statement ca	n be	•	
	A B C I)		
	a) Genus species strain	bacteria	b) Species genus strain	bacteria
	c) Genus species variety		d) Species genus variety	
159		=	y used to separate DNA mol	=
	a) Chromatography	b) PCR	c) RFLP	d) Gel electrophoresis
160	, , ,	•	Prize for his invention polyr	

	(PCR)?						
	a) F. Sanger	b) Paul l	Berg	c) Alec Jeffreys	d) Kary B. Mullis		
161.	Which is non-invasiv	=	_				
	a) Amniocentesis	1	o .	b) Chorionic biopsy			
	c) Foetal blood samp	oling		d) Ultrasonography			
162.	-	_	ria appear white	in contrast to blue colon	ies of non-recombinant		
	bacteria because of:		• •				
	a) Insertional inactiv	ation of alpha	-galactosidase in	non-recombinant bacte	ria		
	=	_	_	recombinant bacteria			
	c) Inactivation of gly						
	d) Non-recombinant	=					
163.	Which of the followi	ng steps are ca	talyzed by <i>taq</i> po	olymerase in a PCR react	tion?		
	a) Denaturation of to	emplate DNA		b) Annealing of prime	rs to template DNA		
	c) Extension of prim	er end on the t	emplate DNA	d) All of the above			
164.	I. In the process of re	ecombinant DN	IA technology aft	er several treatment the	purified DNA is precipitated		
	by adding chilled eth	anol					
	II. The bacterial/plan	nt, animal cell i	s broken down b	y enzymes to release DN	VA, along with RNA, proteins,		
	polysaccharides and	lipids					
	Choose the correct option for above statements						
a) I is true, but II is false b) I is false, but II				b) I is false, but II is tr	ue		
	c) I and II are true			d) I and II are false			
165.	165. Which of the statements are correct about bioreactors?						
	I. It provides all the	optimal cond	itions for achiev	ring the desired produc	t by providing optimal growth		
	conditions like temperature, pH, substrate, salt, vitamin and oxygen						
	II. It is suited for large-scale production of microorganisms under aseptic conditions for a number of days						
	Correct option is						
	a) Only I	b) Only		c) I and II	d) None of the above		
166.	Taq polymerase enz	=	CR is isolated froi		•		
	a) Thermus aquaticu			b) <i>Thermococcus litor</i>	ralis ————————————————————————————————————		
160	c) Salmonelia typhii		11 1	d) None of the above			
16/.	The first hormone an		-		D A L P		
1.00	a) Insulin	b) Thyro	oxine	c) Testosterone	d) Adrenaline		
168.	A gene is made up of			a) Eithar DNA ar DNA	d) Amino ogida		
160	a) DNA The first restriction	b) RNA	rmo II A vivoa	c) Either DNA or RNA isolated by Smith, Wilco			
109.					gnizing a specific sequence of		
	six base pairs, know				ginzing a specific sequence of		
	A B	n as thec	C	an be			
	a) Eco RI Escherici	hia RY 13	Restriction sequ	ience			
	b) Eco RII E. coli R 2		Recognition seq				
	c) Hind II Haemoph						
	d) Bam HI Bacillus		Restriction sequ				
	amyoliqu	efaciens					
170.			d DNA fragments	s are visualized after sta	ining the DNA withA		
	followed by exposur		J		S		
	Here A and B refers						
	A	В					
	a) B-galactosidase	Infrared rad	iation	b) Ethidium bromide	UV radiation		
	c) Ethidium nitrate	γ-rays		d) Ethidium chloride			
171.	In DNA fingerprintin			-			
	a) A positive identifi	_	nade				

c) The polymerase chain reaction amplifies fewer DNA d) The variability of repeated sequences between two restriction sites is evaluated	, .	on enzyme digests/generate		
Straight		-		
173. Following enzymes/chemical/technique are used in the process of gel electrophoresis 1. sample DNA in Interior 1. sample DNA is cut into fragments 1. sample DNA is cut into fragment of sample decided into fragments 1. sample DNA is cut into fragments 1. sample		repeated sequences betwee	en two restriction sites is ev	valuated
173. Following enzymes/chemical/technique are used in the process of gel electrophoresis I. sample DNA is cut into fragments II. restriction endonucleases III. agarose gel IV. cthidium bromide V. UV-radiation VI. elution Mark the correct sequence of their use a) I, II, III, V, V and IV b) I, II, III, V, V and IV c) IV, V, VI, I, II and III d) I, II, IV, V, VI and III 174. Improvement of genotype of an organism by addition of some foreign genes is: a) Genetic diversity b) Gene handling c) Tissue culture d) Genetic engineering 175. Which one is a true statement regarding DNA polymerase used in polymerase chain reaction? a) DNA polymerase is responsible for DNA synthesis b) It is isolated from Protozoa c) It is serves as a selectable marker d) It is serves as a selectable marker d) It is used to ligate introduced DNA in recipient plant cell that sensitive technique to desert male and cell in monthodidin's lymphons to the above 177. Gene therapy involves: a) Introducing of a normal genes in cell b) Eliminating defective and useless genes c) Treating of defective and useless genes d) Replacement of defective genes by normal ones 180. Given below is a sample of a portion of DNA strand giving the base sequence on the opposite strands. What is so special shown in it? 5				
1. Sample DNA is cut into fragments I. sample DNA is cut into fragments II. restriction endonucleases III. agarose gel IIV. ethidium bromide V. UV-radiation VI. elution Mark the correct sequence of their use a) I. II. III, VI. V. and IV b) I. II. III, VI. V. and IV c) IV. V. V. I. II and III d) I. II. IV. V. V. and III d) I. II. IV. V. V. III. III. VI. V. III. III. VI. V				
173. Following enzymes/chemical/technique are used in the process of gel electrophoresis I. sample DNA is cut into fragments II. restriction endonucleases III. agarose gel IV. cthidium bromide V. U.V-radiation VI. elution Mark the correct sequence of their use a) I. JI. III, V. V and IV b) I. JI. JII, V. V and IV c) IV, V, VI. J. II and III d) I. JI. JV, V. VI and III 174. Improvement of genotype of an organism by addition of some foreign genes is: a) Genetic diversity c) Tissue culture d) Genetic engineering 175. Which one is a true statement regarding DNA polymerase used in polymerase chain reaction? a) DNA polymerase is responsible for DNA synthesis b) It is isolated from Protozoa c) It is serves as a selectable marker d) It is used to ligate introduced DNA in recipient plant cell Most sensitive technique to detect malignant cell in non-hodglain's lymphoma is bidivinerase chain reaction Seen cell therapy Seen cel	c) Extra DNA in bact	<mark>eria</mark>		inserted in bacteria for forming
I. restriction endonucleases II. restriction endonucleases III. agarose gel IV. ethidium bromide V. UV-radiation VI. elution Mark the correct sequence of their use a) I. II, III, VI, V and IV b) I. II, III, VI, V and IV c) IV, V, VI, I. II and III d) I. II, IV, V, VI and III 174. Improvement of genotype of an organism by addition of some foreign genes is: a) Genetic diversity b) Gene handling c) Tissue culture d) Genetic engineering 175. Which one is a true statement regarding DNA polymerase used in polymerase chain reaction? a) DNA polymerase is responsible for DNA synthesis b) It is isolated from Protozoa c) It is serves as a selectable marker d) It is used to ligate introduced DNA in recipient plant cell 176. Host sensitive technique in detect malignant cell in non-hoddelin's braphoma is 177. Gene therapy involves: a) Introducing of a normal genes in cell b) Eliminating defective and useless genes c) Treating of defective genes with radiations d) Replacement of defective genes with radiations d) Replacement of defective genes by normal ones 188. Human Genome project was the thought of a) Jean Dausset b) Watson c) Crick d) None of the above 179. Which conserved motifs are found in E. coli genes? a) TATA box b) CAAT box c) Pribnow box d) All of these 180. Given below is a sample of a portion of DNA strand giving the base sequence on the opposite strands. What is so special shown in it? 5'GAATTC3' 3'CTTAAG5' a) Replication completed b) Deletion mutation c) Start codon at the 5' end d) Palindromic sequence of base pairs 181. The DNA used as a carrier for transferring a fragment of foreign DNA into a suitable host is called a) Cloning vector b) Vehicle DNA c) Gene carrier d) All of these 182. The nuclease enzyme, which beings its attack from free end of a polynucleotide, is? a) Exonuclease b) Kinas c) Polymerase d) Endonuclease 183. Genetically engineered bacterium used in production of: a) Thyroxine b) Human insulin c) Epinephrine d) Cortisol	450 D II	1 1/2 1 1		
III. restriction endonucleases III. agarose gel IV. ethidium bromide V. UV-radiation VI. elution Mark the correct sequence of their use a) I, II, III, VI, V and IV b) I, II, III, VI, V and IV c) IV, V, VI, I, II and III d) I, II, IV, V, VI and III 174. Improvement of genotype of an organism by addition of some foreign genes is: a) Genetic diversity c) Tissue culture d) Genetic engineering 175. Which one is a true statement regarding DNA polymerase used in polymerase chain reaction? a) DNA polymerase is responsible for DNA synthesis b) It is is isolated from Protozoa c) It is serves as a selectable marker d) It is used to ligate introduced DNA in recipient plant cell 176. Was sensitive technique to detect inhimant cell in non-hoadidn's lymphoma is a) Stem cell therain b) Gene therapy a) Eliminating defective and useless genes c) Treating of defective genes with radiations d) Replacement of defective genes with radiations d) Replacement of defective genes by normal ones 179. Which conserved motifs are found in E. coli genes? a) TATA box b) CAAT box c) Pribnow box d) All of these 180. Given below is a sample of a portion of DNA strand giving the base sequence on the opposite strands. What is so special shown in it? 5'GAATTC3' 3'		•	ed in the process of gel elec	trophoresis
III. agarose gel IV. ethidium bromide V. UV-radiation VI. elution Mark the correct sequence of their use a) I. II. III. VI. V and IV b) I. II. III. VI. V and IV c) IV, V, VI. I. II and III d) I. II. III. VV, VI and III d) I. II. III. VV, VI and III d) II. III. VV, VI and III d) Genetic diversity d) Gene handling c) Tissue culture d) Genetic engineering d) Genetic e	-	_		
IV. ethidium bromide V. UV-radiation VI. elution Mark the correct sequence of their use a) I, II, III, VI, V and IV b) Genetic diversity c) Tissue culture d) Genetic diversity c) Tissue culture d) Genetic engineering 175. Which one is a true statement regarding DNA polymerase used in polymerase chain reaction? a) DNA polymerase is responsible for DNA synthesis b) It is isolated from Protozoa c) It is serves as a selectable marker d) It is used to ligate introduced DNA in recipient plant cell 176 Most sensitive technique to detect malignant cell in non-hodgkin's lymphoma is polymerase chain reaction is polymerase chain reaction? In polymerase chain reaction? In polymerase chain reaction? In polymerase used to ligate introduced by none of the above 177. Gene therapy involves: a) Introducing of a normal genes in cell b) Eliminating defective and useless genes c) Treating of defective genes with radiations d) Replacement of defective genes w		ıcleases		
V. UV-radiation VI. elution Mark the correct sequence of their use a) I, II, III, VI, V and IV b) I, II, III, VI, V and IV c) IV, V, VI, I, II and III d) I, II, IV, V, VI and III 174. Improvement of genotype of an organism by addition of some foreign genes is: a) Genetic diversity b) Gene handling c) Tissue culture d) Genetic engineering 175. Which one is a true statement regarding DNA polymerase used in polymerase chain reaction? a) DNA polymerase is responsible for DNA synthesis b) It is isolated from Protozoa c) It is serves as a selectable marker d) It is used to ligate introduced DNA in recipient plant cell loss truestive technique to detect malignant cell in non-hodekin's lymphoma is logiomerase chain reaction logiomerase chain reaction? logiomerase chain reactio				
VI. elution Mark the correct sequence of their use a) I, II, III, VI, V and IV b) I, II, III, VI, V and IV c) IV, V, VI, I, II and III d) I, II, IV, V, VI and III 174. Improvement of genotype of an organism by addition of some foreign genes is: a) Genetic diversity b) Gene handling d) Genetic engineering 175. Which one is a true statement regarding DNA polymerase used in polymerase chain reaction? a) DNA polymerase is responsible for DNA synthesis b) It is isolated from Protozoa c) It is serves as a selectable marker d) It is used to ligate introduced DNA in recipient plant cell 176. Most sensitive technique to detect malignant cell in non-hodgkin's lymphoma is a folymerase chain reaction b) Gene therapy c) Stem cell therapy c) Ste		<u>)</u>		
Mark the correct sequence of their use a) I, II, III, VI, V and IV b) I, II, III, VI, V and IV c) IV, V, VI, I, II and III d) I, II, IV, V, VI and III 174. Improvement of genotype of an organism by addition of some foreign genes is: a) Genetic diversity b) Gene handling c) Tissue culture d) Genetic engineering 175. Which one is a true statement regarding DNA polymerase used in polymerase chain reaction? a) DNA polymerase is responsible for DNA synthesis b) It is is solated from Protozoa c) It is serves as a selectable marker d) It is used to ligate introduced DNA in recipient plant cell 176. Which constitute technique to detect malignant cell in non-hodgkin's lymphoma is 187. Gene therapy involves: a) Introducing of a normal genes in cell b) Eliminating defective and useless genes c) Treating of defective genes with radiations d) Replacement of defective genes by normal ones 177. Gene therapy involves: a) Introducing of a normal genes in cell b) Eliminating defective and useless genes c) Treating of defective genes with radiations d) Replacement of defective genes by mormal ones 178. Human Genome project was the thought of a) Jean Dausset b) Watson c) Crick d) None of the above 179. Which conserved motifs are found in E. coli genes? a) TATA box b) CAAT box c) Pribnow box d) All of these 180. Given below is a sample of a portion of DNA strand giving the base sequence on the opposite strands. What is so special shown in it? 5'				
a) I, II, III, VI, V and IV b) I, II, III, VI, V and IV c) IV, V, VI, I, II and III d) I, II, IV, V, VI and III 174. Improvement of genotype of an organism by addition of some foreign genes is: a) Genetic diversity b) Gene handling c) Tissue culture d) Genetic engineering 175. Which one is a true statement regarding DNA polymerase used in polymerase chain reaction? a) DNA polymerase is responsible for DNA synthesis b) It is isolated from Protozoa c) It is serves as a selectable marker d) It is used to ligate introduced DNA in recipient plant cell 176. Most sensitive technique to detect malignant cell in non-hodgkin's lymphoma is a) Bolymerase chain reaction b) Emmerate therapy involves: a) Introducing of a normal genes in cell b) Eliminating defective and useless genes c) Treating of defective genes with radiations d) Replacement of defective genes by normal ones 178. Human Genome project was the thought of a) Jean Dausset b) Watson c) Crick d) None of the above 179. Which conserved motifs are found in E. coli genes? a) TATA box b) CAAT box c) Pribnow box d) All of these 180. Given below is a sample of a portion of DNA strand giving the base sequence on the opposite strands. What is so special shown in it? 5'GAATTC3' 3'				
174. Improvement of genotype of an organism by addition of some foreign genes is: a) Genetic diversity b) Gene handling c) Tissue culture d) Genetic engineering 175. Which one is a true statement regarding DNA polymerase used in polymerase chain reaction? a) DNA polymerase is responsible for DNA synthesis b) It is isolated from Protozoa c) It is serves as a selectable marker d) It is used to ligate introduced DNA in recipient plant cell 176. Most sensitive technique to detect malignant cell in non-hodgkin's lymphoma is a) Polymerase chain reaction b) Gene therapy 177. Gene therapy involves: a) Introducing of a normal genes in cell b) Eliminating defective and useless genes c) Treating of defective genes with radiations d) Replacement of defective genes with radiations d) Replacement of defective genes by normal ones 178. Human Genome project was the thought of a) Jean Dausset b) Watson c) Crick d) None of the above 179. Which conserved motifs are found in E. coli genes? a) TATA box b) CAAT box c) Pribnow box d) All of these 180. Given below is a sample of a portion of DNA strand giving the base sequence on the opposite strands. What is so special shown in it? 5' GAATTC3' 3' CTTAAG5' a) Replication completed c) Start codon at the 5' end d) Polletion mutation c) Start codon at the 5' end d) Polletion mutation d) Palindromic sequence of base pairs 181. The DNA used as a carrier for transferring a fragment of foreign DNA into a suitable host is called a) Cloning vector b) Vehicle DNA c) Gene carrier d) All of these 182. The nuclease enzyme, which beings its attack from free end of a polynucleotide, is? a) Exonuclease b) Kinase c) Polymerase d) Endonuclease 183. Genetically engineered bacterium used in production of: a) Thyroxine b) Human insulin c) Epinephrine d) Cortisol 184. In Southern blotting is separated by gel electrophoresis: a) DNA b) m-RNA c) t-RNA d) Protein				
a) Genetic diversity b) Gene handling c) Tissue culture d) Genetic engineering 175. Which one is a true statement regarding DNA polymerase used in polymerase chain reaction? a) DNA polymerase is responsible for DNA synthesis b) It is isolated from Protozoa c) It is serves as a selectable marker d) It is used to ligate introduced DNA in recipient plant cell 176. Most sensitive technique to detect malignant cell in non-hodgkin's lymphoma is 1 Polymerase chain reaction 1 Stem cell therapy 1 None of the above 177. Gene therapy involves: a) Introducing of a normal genes in cell b) Eliminating defective and useless genes c) Treating of defective genes with radiations d) Replacement of defective genes by normal ones 1 Human Genome project was the thought of a) Jean Dausset b) Watson c) Crick d) None of the above 179. Which conserved motifs are found in E. coli genes? a) TATA box b) CAAT box c) Pribnow box d) All of these 180. Given below is a sample of a portion of DNA strand giving the base sequence on the opposite strands. What is so special shown in it? 5'GAATTC3' 3'				
c) Tissue culture d) Genetic engineering 175. Which one is a true statement regarding DNA polymerase used in polymerase chain reaction? a) DNA polymerase is responsible for DNA synthesis b) It is is olated from Protozoa c) It is serves as a selectable marker d) It is used to ligate introduced DNA in recipient plant cell 176. Wost sensitive technique to detect malignant cell in non-hodzkin's lymphoma is a Polymerase chain reaction b Sene therapy the stem cell therapy the stem c	174. Improvement of gene	otype of an organism by add	dition of some foreign gene	es is:
175. Which one is a true statement regarding DNA polymerase used in polymerase chain reaction? a) DNA polymerase is responsible for DNA synthesis b) It is isolated from Protozoa c) It is serves as a selectable marker d) It is used to ligate introduced DNA in recipient plant cell 176. Most sensitive technique to detect malignant cell in non-hodgkin's lymphoma is a Polymerase chain reaction b) Gene therapy 177. Gene therapy involves: a) Introducing of a normal genes in cell b) Eliminating defective and useless genes c) Treating of defective genes with radiations d) Replacement of defective genes by normal ones 178. Human Genome project was the thought of a) Jean Dausset b) Watson c) Crick d) None of the above 179. Which conserved motifs are found in E. coli genes? a) TATA box b) CAAT box c) Pribnow box d) All of these 180. Given below is a sample of a portion of DNA strand giving the base sequence on the opposite strands. What is so special shown in it? 5' GAATTC 3' 3' CTTAAG 5' a) Replication completed b) Deletion mutation c) Start codon at the 5' end d) Palindromic sequence of base pairs 181. The DNA used as a carrier for transferring a fragment of foreign DNA into a suitable host is called a) Cloning vector b) Vehicle DNA c) Gene carrier d) All of these 182. The nuclease enzyme, which beings its attack from free end of a polynucleotide, is? a) Exonuclease b) Kinase c) Polymerase d) Endonuclease 183. Genetically engineered bacterium used in production of: a) Thyroxine b) Human insulin c) Epinephrine d) Cortisol 184. In Southern blotting is separated by gel electrophoresis: a) DNA b) m-RNA c) t-RNA d) Protein	a) Genetic diversity		b) Gene handling	
a) DNA polymerase is responsible for DNA synthesis b) It is isolated from Protozoa c) It is serves as a selectable marker d) It is used to ligate introduced DNA in recipient plant cell 176 186 Stem cell therapy 187 Gene therapy involves: a) Introducing of a normal genes in cell b) Eliminating defective and useless genes c) Treating of defective genes with radiations d) Replacement of defective genes by normal ones 187 Human Genome project was the thought of a) Jean Dausset b) Watson c) Crick d) None of the above 179 Which conserved motifs are found in E. coli genes? a) TATA box b) CAAT box c) Pribnow box d) All of these 180. Given below is a sample of a portion of DNA strand giving the base sequence on the opposite strands. What is so special shown in it? 5'GAATTC3' 3'CTTAAG5' a) Replication completed c) Start codon at the 5' end d) Palindromic sequence of base pairs 181. The DNA used as a carrier for transferring a fragment of foreign DNA into a suitable host is called a) Cloning vector b) Vehicle DNA c) Gene carrier d) All of these 182. The nuclease enzyme, which beings its attack from free end of a polynucleotide, is? a) Exonuclease b) Kinase c) Polymerase d) Endonuclease 183. Genetically engineered bacterium used in production of: a) Thyroxine b) Human insulin c) Epinephrine d) Cortisol 184. In Southern blotting is separated by gel electrophoresis: a) DNA b) m-RNA c) t-RNA d) Protein	c) Tissue culture		d) Genetic engineerin	ng
b) It is isolated from Protozoa c) It is serves as a selectable marker d) It is used to ligate introduced DNA in recipient plant cell Mast sensitive technique to detect malignant cell in non-hodgkin's lymphoma is Polymerase chain reaction Stem cell therapy Honor of the above 177. Gene therapy involves: a) Introducing of a normal genes in cell b) Eliminating defective and useless genes c) Treating of defective genes with radiations d) Replacement of defective genes by normal ones Human Genome project was the thought of a) Jean Dausset b) Watson c) Crick d) None of the above 179. Which conserved motifs are found in E. coli genes? a) TATA box b) CAAT box c) Pribnow box d) All of these 180. Given below is a sample of a portion of DNA strand giving the base sequence on the opposite strands. What is so special shown in it? 5'GAATTC3' 3'CTTAAG5' a) Replication completed b) Deletion mutation c) Start codon at the 5' end d) Palindromic sequence of base pairs 181. The DNA used as a carrier for transferring a fragment of foreign DNA into a suitable host is called a) Cloning vector b) Vehicle DNA c) Gene carrier d) All of these 182. The nuclease enzyme, which beings its attack from free end of a polynucleotide, is? a) Exonuclease b) Kinase c) Polymerase d) Endonuclease 184. In Southern blotting is separated by gel electrophoresis: a) DNA b) m-RNA c) t-RNA d) Protein	175. Which one is a true s	tatement regarding DNA po	olymerase used in polymer	ase chain reaction?
c) It is serves as a selectable marker d) It is used to ligate introduced DNA in recipient plant cell 176	a) DNA polymerase i	s responsible for DNA synth	nesis	
d) It is used to ligate introduced DNA in recipient plant cell Most sensitive technique to detect malignant cell in non-hodgkin's lymphoma is sensitive technique to detect malignant cell in non-hodgkin's lymphoma is sensitive technique to detect malignant cell in non-hodgkin's lymphoma is sensitive technique to detect malignant cell in non-hodgkin's lymphoma is sensitive technique to detect malignant cell in non-hodgkin's lymphoma is sensitive technique to detect malignant cell in non-hodgkin's lymphoma is sensitive technique to the above. 177. Gene therapy involves: a) Introducing of a normal genes in cell b) Eliminating defective and useless genes c) Treating of defective genes with radiations d) Replacement of defective genes by normal ones 188. Human Genome project was the thought of a) Jean Dausset b) Watson c) Crick d) None of the above 179. Which conserved motifs are found in E. coli genes? a) TATA box b) CAAT box c) Pribnow box d) All of these 180. Given below is a sample of a portion of DNA strand giving the base sequence on the opposite strands. What is so special shown in it? 5'GAATTC3' 3'CTTAAG5' a) Replication completed b) Deletion mutation c) Start codon at the 5' end d) Palindromic sequence of base pairs 181. The DNA used as a carrier for transferring a fragment of foreign DNA into a suitable host is called a) Cloning vector b) Vehicle DNA c) Gene carrier d) All of these 182. The nuclease enzyme, which beings its attack from free end of a polynucleotide, is? a) Exonuclease b) Kinase c) Polymerase d) Endonuclease 183. Genetically engineered bacterium used in production of: a) Thyroxine b) Human insulin c) Epinephrine d) Cortisol 184. In Southern blotting is separated by gel electrophoresis: a) DNA b) m-RNA c) t-RNA d) Protein	b) It is isolated from	Protozoa		
Rolymerase chain reaction Stem cell therapy Stem cell therap	c) It is serves as a sel	lectable marker		
Follymerase chain reaction Stem cell therapy Stem cell therapy None of the above	d) It is used to ligate	introduced DNA in recipien	it plant cell	
177. Gene therapy involves: a) Introducing of a normal genes in cell b) Eliminating defective and useless genes c) Treating of defective genes with radiations d) Replacement of defective genes by normal ones 178. Human Genome project was the thought of a) Jean Dausset b) Watson c) Crick d) None of the above 179. Which conserved motifs are found in E. coli genes? a) TATA box b) CAAT box c) Pribnow box d) All of these 180. Given below is a sample of a portion of DNA strand giving the base sequence on the opposite strands. What is so special shown in it? 5'GAATTC3' 3'CTTAAG5' a) Replication completed b) Deletion mutation c) Start codon at the 5' end d) Palindromic sequence of base pairs 181. The DNA used as a carrier for transferring a fragment of foreign DNA into a suitable host is called a) Cloning vector b) Vehicle DNA c) Gene carrier d) All of these 182. The nuclease enzyme, which beings its attack from free end of a polynucleotide, is? a) Exonuclease b) Kinase c) Polymerase d) Endonuclease 183. Genetically engineered bacterium used in production of: a) Thyroxine b) Human insulin c) Epinephrine d) Cortisol 184. In Southern blotting is separated by gel electrophoresis: a) DNA b) m-RNA c) t-RNA d) Protein	176. Most sensitive techni	ique to detect malignant cel	ll in non-hodgkin's lympho	<mark>ma is</mark>
177. Gene therapy involves: a) Introducing of a normal genes in cell b) Eliminating defective and useless genes c) Treating of defective genes with radiations d) Replacement of defective genes by normal ones 178. Human Genome project was the thought of: a) Jean Dausset b) Watson c) Crick d) None of the above 179. Which conserved motifs are found in E. coli genes? a) TATA box b) CAAT box c) Pribnow box d) All of these 180. Given below is a sample of a portion of DNA strand giving the base sequence on the opposite strands. What is so special shown in it? 5'GAATTC3' 3'CTTAAG5' a) Replication completed b) Deletion mutation c) Start codon at the 5' end d) Palindromic sequence of base pairs 181. The DNA used as a carrier for transferring a fragment of foreign DNA into a suitable host is called a) Cloning vector b) Vehicle DNA c) Gene carrier d) All of these 182. The nuclease enzyme, which beings its attack from free end of a polynucleotide, is? a) Exonuclease b) Kinase c) Polymerase d) Endonuclease 183. Genetically engineered bacterium used in production of: a) Thyroxine b) Human insulin c) Epinephrine d) Cortisol 184. In Southern blotting is separated by gel electrophoresis: a) DNA b) m-RNA c) t-RNA d) Protein		reaction		
a) Introducing of a normal genes in cell b) Eliminating defective and useless genes c) Treating of defective genes with radiations d) Replacement of defective genes by normal ones 178 Human Genome project was the thought of a) Jean Dausset b) Watson c) Crick d) None of the above 179. Which conserved motifs are found in E. coli genes? a) TATA box b) CAAT box c) Pribnow box d) All of these 180. Given below is a sample of a portion of DNA strand giving the base sequence on the opposite strands. What is so special shown in it? 5'GAATTC3' 3'CTTAAG5' a) Replication completed b) Deletion mutation c) Start codon at the 5' end d) Palindromic sequence of base pairs 181. The DNA used as a carrier for transferring a fragment of foreign DNA into a suitable host is called a) Cloning vector b) Vehicle DNA c) Gene carrier d) All of these 182. The nuclease enzyme, which beings its attack from free end of a polynucleotide, is? a) Exonuclease b) Kinase c) Polymerase d) Endonuclease 183. Genetically engineered bacterium used in production of: a) Thyroxine b) Human insulin c) Epinephrine d) Cortisol 184. In Southern blotting is separated by gel electrophoresis: a) DNA b) m-RNA c) t-RNA d) Protein	c) Stem cell therapy		d) None of the above	
b) Eliminating defective and useless genes c) Treating of defective genes with radiations d) Replacement of defective genes by normal ones 178 Human Genome project was the thought of a) Jean Dausset b) Watson c) Crick d) None of the above 179. Which conserved motifs are found in E. coli genes? a) TATA box b) CAAT box c) Pribnow box d) All of these 180. Given below is a sample of a portion of DNA strand giving the base sequence on the opposite strands. What is so special shown in it? 5'GAATTC3' 3'CTTAAG5' a) Replication completed b) Deletion mutation c) Start codon at the 5' end d) Palindromic sequence of base pairs 181. The DNA used as a carrier for transferring a fragment of foreign DNA into a suitable host is called a) Cloning vector b) Vehicle DNA c) Gene carrier d) All of these 182. The nuclease enzyme, which beings its attack from free end of a polynucleotide, is? a) Exonuclease b) Kinase c) Polymerase d) Endonuclease 183. Genetically engineered bacterium used in production of: a) Thyroxine b) Human insulin c) Epinephrine d) Cortisol 184. In Southern blotting is separated by gel electrophoresis: a) DNA b) m-RNA c) t-RNA d) Protein	- -			
c) Treating of defective genes with radiations d) Replacement of defective genes by normal ones 178 Human Genome project was the thought off a) Jean Dausset b) Watson c) Crick d) None of the above 179. Which conserved motifs are found in E. coli genes? a) TATA box b) CAAT box c) Pribnow box d) All of these 180. Given below is a sample of a portion of DNA strand giving the base sequence on the opposite strands. What is so special shown in it? 5'GAATTC3' 3'CTTAAG5' a) Replication completed b) Deletion mutation c) Start codon at the 5' end d) Palindromic sequence of base pairs 181. The DNA used as a carrier for transferring a fragment of foreign DNA into a suitable host is called a) Cloning vector b) Vehicle DNA c) Gene carrier d) All of these 182. The nuclease enzyme, which beings its attack from free end of a polynucleotide, is? a) Exonuclease b) Kinase c) Polymerase d) Endonuclease 183. Genetically engineered bacterium used in production of: a) Thyroxine b) Human insulin c) Epinephrine d) Cortisol 184. In Southern blotting is separated by gel electrophoresis: a) DNA b) m-RNA c) t-RNA d) Protein	a) Introducing of a n	ormal genes in cell		
d) Replacement of defective genes by normal ones Human Genome project was the thought of	b) Eliminating defect	tive and useless genes		
a) Jean Dausset b) Watson c) Crick d) None of the above 179. Which conserved motifs are found in <i>E. coli</i> genes? a) TATA box b) CAAT box c) Pribnow box d) All of these 180. Given below is a sample of a portion of DNA strand giving the base sequence on the opposite strands. What is so special shown in it? 5'GAATTC3' 3'CTTAAG5' a) Replication completed b) Deletion mutation c) Start codon at the 5' end d) Palindromic sequence of base pairs 181. The DNA used as a carrier for transferring a fragment of foreign DNA into a suitable host is called a) Cloning vector b) Vehicle DNA c) Gene carrier d) All of these 182. The nuclease enzyme, which beings its attack from free end of a polynucleotide, is? a) Exonuclease b) Kinase c) Polymerase d) Endonuclease 183. Genetically engineered bacterium used in production of: a) Thyroxine b) Human insulin c) Epinephrine d) Cortisol 184. In Southern blotting is separated by gel electrophoresis: a) DNA b) m-RNA c) t-RNA d) Protein	c) Treating of defecti	ive genes with radiations		
a) Jean Dausset b) Watson c) Crick d) None of the above 179. Which conserved motifs are found in <i>E. coli</i> genes? a) TATA box b) CAAT box c) Pribnow box d) All of these 180. Given below is a sample of a portion of DNA strand giving the base sequence on the opposite strands. What is so special shown in it? 5'GAATTC3' 3'CTTAAG5' a) Replication completed b) Deletion mutation c) Start codon at the 5' end d) Palindromic sequence of base pairs 181. The DNA used as a carrier for transferring a fragment of foreign DNA into a suitable host is called a) Cloning vector b) Vehicle DNA c) Gene carrier d) All of these 182. The nuclease enzyme, which beings its attack from free end of a polynucleotide, is? a) Exonuclease b) Kinase c) Polymerase d) Endonuclease 183. Genetically engineered bacterium used in production of: a) Thyroxine b) Human insulin c) Epinephrine d) Cortisol 184. In Southern blotting is separated by gel electrophoresis: a) DNA b) m-RNA c) t-RNA d) Protein	d) Replacement of de	efective genes by normal on	es	
179. Which conserved motifs are found in <i>E. coli</i> genes? a) TATA box b) CAAT box c) Pribnow box d) All of these 180. Given below is a sample of a portion of DNA strand giving the base sequence on the opposite strands. What is so special shown in it? 5'GAATTC3' 3'CTTAAG5' a) Replication completed c) Start codon at the 5' end d) Palindromic sequence of base pairs 181. The DNA used as a carrier for transferring a fragment of foreign DNA into a suitable host is called a) Cloning vector b) Vehicle DNA c) Gene carrier d) All of these 182. The nuclease enzyme, which beings its attack from free end of a polynucleotide, is? a) Exonuclease b) Kinase c) Polymerase d) Endonuclease 183. Genetically engineered bacterium used in production of: a) Thyroxine b) Human insulin c) Epinephrine d) Cortisol 184. In Southern blotting is separated by gel electrophoresis: a) DNA b) m-RNA c) t-RNA d) Protein	178. Human Genome proj	ect was the thought of:		
a) TATA box b) CAAT box c) Pribnow box d) All of these 180. Given below is a sample of a portion of DNA strand giving the base sequence on the opposite strands. What is so special shown in it? 5'GAATTC3' 3'CTTAAG5' a) Replication completed b) Deletion mutation c) Start codon at the 5' end d) Palindromic sequence of base pairs 181. The DNA used as a carrier for transferring a fragment of foreign DNA into a suitable host is called a) Cloning vector b) Vehicle DNA c) Gene carrier d) All of these 182. The nuclease enzyme, which beings its attack from free end of a polynucleotide, is? a) Exonuclease b) Kinase c) Polymerase d) Endonuclease 183. Genetically engineered bacterium used in production of: a) Thyroxine b) Human insulin c) Epinephrine d) Cortisol 184. In Southern blotting is separated by gel electrophoresis: a) DNA b) m-RNA c) t-RNA d) Protein	a) Jean Dausset	b) Watson	c) Crick	d) None of the above
180. Given below is a sample of a portion of DNA strand giving the base sequence on the opposite strands. What is so special shown in it? 5'GAATTC3' 3'CTTAAG5' a) Replication completed b) Deletion mutation c) Start codon at the 5' end d) Palindromic sequence of base pairs 181. The DNA used as a carrier for transferring a fragment of foreign DNA into a suitable host is called a) Cloning vector b) Vehicle DNA c) Gene carrier d) All of these 182. The nuclease enzyme, which beings its attack from free end of a polynucleotide, is? a) Exonuclease b) Kinase c) Polymerase d) Endonuclease 183. Genetically engineered bacterium used in production of: a) Thyroxine b) Human insulin c) Epinephrine d) Cortisol 184. In Southern blotting is separated by gel electrophoresis: a) DNA b) m-RNA c) t-RNA d) Protein	179. Which conserved mo	otifs are found in <i>E. coli</i> gen	es?	
is so special shown in it? 5'GAATTC3' 3'CTTAAG5' a) Replication completed b) Deletion mutation c) Start codon at the 5' end d) Palindromic sequence of base pairs 181. The DNA used as a carrier for transferring a fragment of foreign DNA into a suitable host is called a) Cloning vector b) Vehicle DNA c) Gene carrier d) All of these 182. The nuclease enzyme, which beings its attack from free end of a polynucleotide, is? a) Exonuclease b) Kinase c) Polymerase d) Endonuclease 183. Genetically engineered bacterium used in production of: a) Thyroxine b) Human insulin c) Epinephrine d) Cortisol 184. In Southern blotting is separated by gel electrophoresis: a) DNA b) m-RNA c) t-RNA d) Protein	a) TATA box	b) CAAT box	c) Pribnow box	d) All of these
5'GAATTC3' 3'CTTAAG5' a) Replication completed b) Deletion mutation c) Start codon at the 5' end d) Palindromic sequence of base pairs 181. The DNA used as a carrier for transferring a fragment of foreign DNA into a suitable host is called a) Cloning vector b) Vehicle DNA c) Gene carrier d) All of these 182. The nuclease enzyme, which beings its attack from free end of a polynucleotide, is? a) Exonuclease b) Kinase c) Polymerase d) Endonuclease 183. Genetically engineered bacterium used in production of: a) Thyroxine b) Human insulin c) Epinephrine d) Cortisol 184. In Southern blotting is separated by gel electrophoresis: a) DNA b) m-RNA c) t-RNA d) Protein	180. Given below is a sam	ple of a portion of DNA stra	and giving the base sequen	ce on the opposite strands. What
3'CTTAAG5' a) Replication completed b) Deletion mutation c) Start codon at the 5' end d) Palindromic sequence of base pairs 181. The DNA used as a carrier for transferring a fragment of foreign DNA into a suitable host is called a) Cloning vector b) Vehicle DNA c) Gene carrier d) All of these 182. The nuclease enzyme, which beings its attack from free end of a polynucleotide, is? a) Exonuclease b) Kinase c) Polymerase d) Endonuclease 183. Genetically engineered bacterium used in production of: a) Thyroxine b) Human insulin c) Epinephrine d) Cortisol 184. In Southern blotting is separated by gel electrophoresis: a) DNA b) m-RNA c) t-RNA d) Protein	is so special shown in	n it?		
a) Replication completed b) Deletion mutation c) Start codon at the 5' end d) Palindromic sequence of base pairs 181. The DNA used as a carrier for transferring a fragment of foreign DNA into a suitable host is called a) Cloning vector b) Vehicle DNA c) Gene carrier d) All of these 182. The nuclease enzyme, which beings its attack from free end of a polynucleotide, is? a) Exonuclease b) Kinase c) Polymerase d) Endonuclease 183. Genetically engineered bacterium used in production of: a) Thyroxine b) Human insulin c) Epinephrine d) Cortisol 184. In Southern blotting is separated by gel electrophoresis: a) DNA b) m-RNA c) t-RNA d) Protein	5'GAATTC	3'		
c) Start codon at the 5' end d) Palindromic sequence of base pairs 181. The DNA used as a carrier for transferring a fragment of foreign DNA into a suitable host is called a) Cloning vector b) Vehicle DNA c) Gene carrier d) All of these 182. The nuclease enzyme, which beings its attack from free end of a polynucleotide, is? a) Exonuclease b) Kinase c) Polymerase d) Endonuclease 183. Genetically engineered bacterium used in production of: a) Thyroxine b) Human insulin c) Epinephrine d) Cortisol 184. In Southern blotting is separated by gel electrophoresis: a) DNA b) m-RNA c) t-RNA d) Protein	3'CTTAAG	5'		
181. The DNA used as a carrier for transferring a fragment of foreign DNA into a suitable host is called a) Cloning vector b) Vehicle DNA c) Gene carrier d) All of these 182. The nuclease enzyme, which beings its attack from free end of a polynucleotide, is? a) Exonuclease b) Kinase c) Polymerase d) Endonuclease 183. Genetically engineered bacterium used in production of: a) Thyroxine b) Human insulin c) Epinephrine d) Cortisol 184. In Southern blotting is separated by gel electrophoresis: a) DNA b) m-RNA c) t-RNA d) Protein	a) Replication compl	eted	b) Deletion mutation	
a) Cloning vector b) Vehicle DNA c) Gene carrier d) All of these 182. The nuclease enzyme, which beings its attack from free end of a polynucleotide, is? a) Exonuclease b) Kinase c) Polymerase d) Endonuclease 183. Genetically engineered bacterium used in production of: a) Thyroxine b) Human insulin c) Epinephrine d) Cortisol 184. In Southern blotting is separated by gel electrophoresis: a) DNA b) m-RNA c) t-RNA d) Protein	c) Start codon at the	5' end	d) Palindromic seque	ence of base pairs
182. The nuclease enzyme, which beings its attack from free end of a polynucleotide, is? a) Exonuclease b) Kinase c) Polymerase d) Endonuclease 183. Genetically engineered bacterium used in production of: a) Thyroxine b) Human insulin c) Epinephrine d) Cortisol 184. In Southern blotting is separated by gel electrophoresis: a) DNA b) m-RNA c) t-RNA d) Protein	181. The DNA used as a ca	arrier for transferring a frag	gment of foreign DNA into a	a suitable host is called
a) Exonuclease b) Kinase c) Polymerase d) Endonuclease 183. Genetically engineered bacterium used in production of: a) Thyroxine b) Human insulin c) Epinephrine d) Cortisol 184. In Southern blotting is separated by gel electrophoresis: a) DNA b) m-RNA c) t-RNA d) Protein	a) Cloning vector	b) Vehicle DNA	c) Gene carrier	d) All of these
183. Genetically engineered bacterium used in production of: a) Thyroxine b) Human insulin c) Epinephrine d) Cortisol 184. In Southern blotting is separated by gel electrophoresis: a) DNA b) m-RNA c) t-RNA d) Protein	182. The nuclease enzyme	e, which beings its attack fro	om free end of a polynucle	otide, is?
a) Thyroxine b) Human insulin c) Epinephrine d) Cortisol 184. In Southern blotting is separated by gel electrophoresis: a) DNA b) m-RNA c) t-RNA d) Protein	a) Exonuclease	b) Kinase	c) Polymerase	d) Endonuclease
a) Thyroxine b) Human insulin c) Epinephrine d) Cortisol 184. In Southern blotting is separated by gel electrophoresis: a) DNA b) m-RNA c) t-RNA d) Protein	183. Genetically engineer	ed bacterium used in produ	ction of:	
184. In Southern blotting is separated by gel electrophoresis: a) DNA b) m-RNA c) t-RNA d) Protein				d) Cortisol
a) DNA b) m-RNA c) t-RNA d) Protein	184. In Southern blotting.	is separated by gel ele		
				d) Protein
	185. Taq polymerase enzy	yme is found in:		

- a) Thermus aquatecus b) E. coli c) Pseudomonas d) Agrobacterium 186. The process used for separation of protein in polyacrylamide gel is called: a) Southern blotting b) Northern blotting c) Western blotting d) Eastern blotting 187. Which of the following methods(s) is used to introduce foreign DNA into host cells? a) Gene gun method b) Gel electrophoresis d) Extension c) Elution 188. The figure shown three steps (A, B, C) of Polymerase Chain Reaction PCR. Select the option giving correct identification together with what represents? a) B-denaturation at a temperature of about 98°C separating the two DNA strands b) A-denaturation at a temperature of about 50°C c) C-extension in the presence of heat stable DNA polymerase d) A-annealing with three sets of primers 189. DNA fingerprinting method is very useful for: a) DNA tests for identity and relationships b) Forensic studies c) Polymorphism d) All of the above 190. Restriction endonucleases are used as: a) Molecular build up at nucleotides b) Molecular degradation to DNA breakup c) Molecular knives for cutting DNA at specific sites d) Molecular cement to combine DNA sites 191. After completion of the biosynthetic stage in the bioreactors, the product undergoes. Separation and purification processes, collectively termed as a) Transformation b) Transduction c) Downstream processing d) Upstream processing 192. Which of the following should be choosen for best yield if one has to produce a recombinant protein or enzyme on a large scale, using microbial plants/anima/human cell? a) Stirred-tank bioreactor b) Electrophoresis c) Laboratory flask of largest capacity d) All of the above 193. Go through the figure and select the option for C and D. Here A and B are taken as vector/plasmid DNA and foreign DNA respectively Restriction enzyme Enzyme joining the recognizing palindrome C sticky ends D Eco RI a) *Eco* RI **DNA** ligase b) DNA ligase **DNA** ligase d) DNA ligase Exonuclease c) Exonuclease 194. Which of the following is known as molecular scissors of DNA? a) Ligase b) Polymerases c) Restriction endonucleases d) Transcriptase
- 195. A kind of biotechnology involving manipulation of DNA is
 a) DNA replication
 b) Genetic engineering
 c) Denaturation
 d) Renaturation
 196. Harris and J.F. Watkins in 1965 first time reported the fusion of following cell lines to form hybrids:
 a) Mouse and man
 b) Mouse and hamster

	c) Mouse and click erythrocytes	d) Mouse and Drosophila	
197.	Polymerase chain reaction employs		
	a) Primers and DNA ligase	b) DNA ligase only	
	c) DNA polymerase	d) Primer and DNA polym	ierase
198.	An antibiotic resistance gene in a vector usually help		
	a) Competent cells b) Transformed cells	c) Recombinant cells	d) None of these
199.	The collection of bacteria with gDNA is called:	•	
	a) DNA clones	b) DNA library	
	c) Genomic DNA library	d) cDNA library	
200.	Which of the following statements are correct with	respect to a bioreactor?	
	I. It can process small volume of culture		
	II. It provides optimum temperature, pH, salt, vitam	ins and oxygen	
	III. Sparged stirred-tank bioreactor is a stirred type	reactor in which air is bubb	led
	Choose the correct option		
	a) I and II b) I and II	c) II and III	d) I, II and III
201.	PCR and Restriction Fragment Length Polymorphism	n are the methods for:	
	a) Genetic transformation	b) DNA sequencing	
	c) Genetic fingerprinting	d) Study of enzymes	
202.	Restriction enzymes may be used for:		
	a) Making recombinant DNA	b) Gene mapping	
	c) Diagnosis of genetic diseases	d) All the above	
203.	Vent polymerase enzyme used in PCR is isolated fro	<mark>om</mark>	
	a) <i>Thermococcus litoralis</i>	b) <i>Thermus aquaticus</i>	
	c) <i>E. coli</i>	d) <i>Salmonella typhimuriu</i>	<mark>m</mark>
204.	Genetically bacteria have been successfully used in t	the commercial production	of:
	a) Human insulin b) Testosterone	c) Thyroxine	d) Melatonin
205.	DNA fingerprinting method is very useful for:		
	a) DNA tests for identity and relationships	b) Forensic studies	
	c) Polymorphism	d) All of the above	
206.	Plasmids are autonomously replicating mini chromo	osomes found in:	
	a) Bacteriophage lambda	b) Leishmania donovani	
	c) Escherichia coli	d) Paramecium caudatu	
207.	Production of a human protein in bacteria in genetic		cause:
	a) Bacterial cell can carry out the RNA splicing react		
	b) The human chromosome can replicate in bacteria		
	c) The mechanism of gene regulation is identical in	humans and bacteria	
	d) The genetic code is universal		
208.	Reverse transcriptase:		
	a) Disintegrates host DNA	b) Translates host DNA	
	c) Transcribes viral RNA to DNA	d) Polymerises host DNA	
209.	An example of gene therapy is:		
	a) Production of injectable Hepatitis B vaccine		
	b) Production of vaccines in food crops like potatoes		C
	c) Production of test tube babies by artificial insemi	-	
	d) Introduction of gene for adenosine deaminase in	persons suffering from Seve	ere Combined Immuno-
040	Deficiency (SCID)		
Z10.	Synthetic DNA or sDNA is:		
	a) DNA synthesized in lab without any template		
	b) DNA synthesized in the cell without any template		
	c) DNA synthesized in the lab, without any nucleotic		
	d) DNA synthesized in the cell without any nucleotic	ae	

211. Stirred-tank bio	oreactors have advantages over s	shake flasks because they	7		
	temperature and pH	,			
	er aeration and mixing propertie	es			
•	the entry of CO ₂				
d) Are easy to o	· -				
-	oning' which is called a gene taxi	?			
a) Vaccine	b) Plasmid	c) Bacteria	d) Protozoa		
•	ence near the RNA start point of	•	-		
a) Nicks	b) DNA marker	c) Pallindrome	d) Pribnow box		
•	is defined as the number of copi	•	•		
= =	15-100 copies per cell	es of plasmia present in t			
	ng the above statements				
a) I is true, II is	_	c) Both are true	d) Both are false		
	e following hydrolyses internal	•			
a) Lipase	b) Protease	c) Exonuclease	d) Endonuclease		
, <u>.</u>	•	•	d) Endonuciease		
	and for the popular crop Bt cott		d) Pacillus thuringiansis		
a) Best	b) Best type	c) Biotechnology	d) Bacillus thuringiensis		
	lowing statement is incorrect?				
	ains gene coding for viral protein	1			
	cates like plasmids				
	ntibiotic resistant marker gene				
·	12 bases helping to join complet	e genome to make it circi	llar		
218. An attenuated v					
	t is non-pathogenic				
	ed viral particle				
=	recombinant DNA to other virus	es			
	luce an immune response				
	lowing has popularized the PCR				
•	lity of DNA template	b) Availability of sy	_

<i>22</i> 4.	a) Foreign RNA in all its o		b) Foreign DNA in all its	ralle
	c) Foreign DNA in some of		d) Both 'A' and 'C'	CCIIS
225	-		the organism and its cell w	all degrading enzyme?
445.	a) Plant cells-Cellulase	b) Algae-Methylase	c) Fungi-Chitinase	d) Bacteria-Lysozyme
226	_	, ,	the removal of oil spills. W	· · ·
220.	danger of these bacteria		the removal of on spins. w	nat is the most realistic
		ne production of a strain pa	athogonic to humans	
			itive advantage of the "peta	ro-hacterium"
	c) Destruction of natural		reive advantage of the pen	o bacterium
	d) Poisoning of the food of			
227		from the messenger RNA r	nolecules with the help of	
	a) Restriction enzymes	nom the messenger ravir	b) Reverse transcriptase	
	c) DNA polymerase		d) Adenosine deaminase	
228.	Mishandling of genetic er	igineering may cause:	w) 110011001110 0.0011111000	
	a) Genetic erosion	b) Green revolution	c) Silver revolution	d) White revolution
229.	Gene for cloning may be			
	- -	nce of nucleotides is known	1	
			lectrophoresis to separate	restriction fragments
	c) By the Sanger method		1	Ü
		ntary DNA from genes with	out introns	
230.	Source of <i>taq</i> polymerase	=		
	a) Thermophilic fungus		b) Mesophilic fungus	
	c) Thermophilic bacteriu	m	d) Halophilic bacterium	
231.	Genetic engineering has l	oeen successfully used for ן	producing:	
	a) Transgenic models for	studying new treatment fo	or certain cardiac diseases	
	b) Transgenic Cow-Rosie	which produces high fat m	ilk for making ghee	
	c) Animals like bulls for f	arm work as they have sup	oer power	
	d) Transgenic mice for te	sting safety of polio vaccin	e before sue in humans	
232.	Which of the following is	used as a best genetic vect	or in plants?	
	a) <i>Bacillus thuringiensis</i>		b) Agrobacterium fumefa	nciens
	c) <i>Pseudomonas putida</i>		d) None of the above	
233.	Plants in comparison to a	inimals are more rapidly m	anipulated by genetic engi	neering. Select out the most
	probable reason for this			
	a) Totipotency shown by	=		
		regenerate a whole plant l	=	
		supplemented with plant t	issue culture techniques	
	d) All of the above			
234.	Which of the following pa	airs is correctly matched?		
	a) Central dogma-Codon		b) Okazaki fragments-Sp	-
	c) RNA polymerase-RNA	=	d) Restriction enzymes-0	Genetic engineering
235.	Recombinant DNA techno			
	a) Stanley Cohen and Har	bert Boyer	b) Bateson and Punnet	
00.	c) Huxley and Harvey	1 1 1	d) Schleiden and Schwan	n
736	Western blotting techniq	HE Was developed hw		

- a) Alwin
- b) Edwin
- c) Towbin
- d) Thomas

- 237. In recombinant DNA technique, the term vector refers to a
 - a) Donor DNA, it is identified and picked up through electrophoresis
 - b) Plasmid, transfers DNA into living cell
 - c) Collection of entire genome in form of plasmid
 - d) Enzyme, cuts the DNA at specific sites
- 238. Complete transduction is:
 - a) Transfer of whole genome with the help of virus
 - b) Picking up of one or more genes by a phage and transfer it to second host
 - c) Integration of gene brought by viral particle into genome of new host
 - d) Both B and C
- 239. The function of polymerase chain reaction (PCR) is:
 - a) Translation
- b) Transduction
- c) DNA amplification
- d) None of these

- 240. The steps involved in the Southern blot test are as follows
 - I. X-ray film
 - II. Electrophoresis
 - III. Digestion with restriction enzyme
 - IV. Ethidium bromide
 - V. Radioactive probe

Choose the option having correct sequential order of these events

- a) III, II, IV, V and I
- b) III, IV, II, V and I
- c) III, II, V, IV and I
- d) II, IV, III, V and I
- 241. The given figure is the diagrammatic representation of the *E. coli* vector pBR322. Which one of the given options correctly identifies its certain component(s)?

- a) *Ori*-original restriction enzymes
- b) *Rop*-reduced osmotic pressure
- c) Hind III, Eco RI-selectabel markers
- d) amp^R, tet^R-antibiotic resistances genes
- 242. The restriction enzyme(s) used in recombinant DNA technology that make staggered cuts in DNA leaving sticky ends is/are
- a) *Eco* RI
- b) Hind II
- c) Bam HI
- d) All of the above

- 243. RNA processing is:
 - a) An event that occurs after RNA transcribed
- b) The rejection of old, worn-out RNA
- c) An event that occurs before RNA is transcribed
- d) Both (A) and (C)

- 244. Find out the wrong statements
 - a) Mobile genetic elements, transposons were visualized by Barbara McClintock
 - b) Udder cell and somatic cell is used to produce the cloned sheep by nuclear transplantation method
 - c) In pedigree analysis, a person immediately affected by and action is called propositus
 - d) DNA ligases are used to cleave a DNA molecule
- 245. Widely used tool in genetic engineering of crop plants is:
 - a) Protoplast fusion

b) Transposon

c) Microinjection

- d) Agrobacterium mediation
- 246. DNA fingerprinting method is very useful for:
 - a) DNA tests for identity and relationships
- b) Forensic studies

c) Polymorphism

d) All of the above

247. Who among the following discovered the enzyr	ne restriction endonuclease?	
a) Hamilton Othanel Smith	b) Sir Godfrey Hounsfi	eld
c) F. Jacob	d) Andre Lwoff	
248. The mobile genetic element is		
a) Transposons b) Mutation	c) Endonuclease	d) Variation
249. The enzyme used for cutting DNA segment in g	enetic engineering is:	
a) ATP-ase	b) Ligase	
c) DNA polymerase	d) Restriction endonuc	lease
250. When the number of genes increases in respon	•	
a) Gene dosage b) Gene pool	c) Gene amplification	d) Gene frequency
251. Identify the palindromic sequence in the follow	-	1,111,11
	_	, CGATAC
a) $\frac{\text{GAATTC}}{\text{CTTUUG}}$ b) $\frac{\text{GGATCC}}{\text{CCTAGG}}$	c) $\frac{\text{CCTGGA}}{\text{GGACCT}}$	d) CGATAC GCTAAG
252. Colony hybridization procedure for identificati	on of plasmid clones is called	
a) Southern blotting	b) Grunstein-Hogness	
c) DNA probes	d) Molecular assay	
253. The different basic steps of genetic engineering	•	
I. Identification of DNA with desirable genes	,	
II. Gene transfer		
III. Maintenance of DNA in host and gene cloning	າg	
IV. Introduction of DNA into host to from recon	_	
Which of the following represents the correct s		
a) I, II, III and IV b) I, IV, III and II	c) III, IV, II and I	d) I, III, IV and II
254. Which of the following steps are involved in the	•	
order	e process of recombinant bloc	ceimology. In range in correct
I. Extraction of the desired gene product		
II. Amplification of the gene of interest		
III. Isolation of a desired DNA fragment		
IV. Ligation of the DNA fragment into a vector		
V. Insertion of recombinant DNA into the host		
Correct order is		
a) I, II, III, IV and V b) III, II, IV, V and I	c) II, IV, V, III and I	d) I, IV, V, III and II
255. In bacteria, genes for antibiotic resistance are u		uj i, iv, v, iii aliu ii
_	=	d) Plasmids
	c) Mitochondria	d) Plasmids
256. Natural genetic engineer is:	h) Danidamanaa am	
a) Bacillus subtillis	b) Pseudomonas spp	
c) Escherichia coli	d) Agrobacterium tun	iefaciens
257. A number of bacteria with recombinant DNA of	7 -	D.C. C
a) Clone library b) Gene library	c) Gene pool	d) Gene frequency
258. IA is the ability of a cell to take up foreign		.
II. The cell is treated with specific concentratio	n of a divalent cation such as	B to increase pore size in
cell wall		
III. InC method recombinant DNA is direct		an animal cell
The most appropriate option regarding A, B an		
a) A-Competency, B-Calcium, C-gene gun meth		
b) A-Transformation, B-Sodium, C-microinjecti		
c) A-Competency, B-Calcium, C-microinjection		
d) A-Transformation, B-Sodium, C-gene gun me		
259. T_1 plasmid is used for making transgenic plants		
a) Azotobacter	b) Agrobacterium	
c) Rhizobium in leguminous root	d) Yeast	

260. Identify and match the labelled items A, B, C, D, E, F and G in the diagram below from the list I-VII given with components Extract mRNA for gene DNA for gene Doublestranded DNA Add sticky end sequence and treat with endonuclease cDNA with 'sticky ends' $F \downarrow$ Added to Gbacterium I. DNA polymerase II. plasmid III. plasmid with 'sticky ends' IV. DNA ligase V. restriction endonuclease VI. recombinant DNA VII. reverse transcriptase The correct components are A B C D E F G a) VII I II V III IV VI b) VII VI V IV III II I c) VII V III I II IV VI d) I II IV VI III V VII 261. A technology which has found immense use in solving cases of disputed parentage is: a) DNA fingerprinting b) Polymerase chain reaction c) Recombinant DNA technology d) Monoclonal antibody production 262. The most important feature in a plasmid to be used as a vector is a) Origin of replication b) Presence of a selectable marker c) Presence of sites for restriction endonuclease d) Its size 263. DNA gyrase, the enzyme that participates in the process of DNA replication is a type of a) DNA ligase b) DNA polymerase d) Reverse transcriptase c) DNA topoisomerase 264. Abnormal gene is replaced by normal gene through: d) Radiation a) Gene therapy b) Medicines c) Cloning 265. The key tools required for the recombinant DNA technology are I. restriction enzymes II. Polymerase enzymes III. host organism ligases IV. Vectors V. host organisms Select the correct option a) I, II and III b) I, III, IV and V c) I, II, III and V d) I, II, III, IV and V 266. A tumour inducing plasmid widely used in the production of transgenic plants in that of: a) Escherichia coli b) Bacillus thuringiensis d) Agrobacterium tume faciens c) Staphylococcus aureus 267. Which one of the following palindromic base sequences in DNA can be easily cut at about the middle by

some particular restriction enzyme?

_CTTAAG__

a) 5'_____GATATG_____ 3'____CTACTA____ b) 5'____GAATTC___

3'_

	c) 5'3'		
	3'5'		
	d) 5'3'		
	3'5'		
268	. Which of the following infection (s) can be diagnos	ed by the use of polymera	se chain reaction?
	a) HIV-1 and HIV-2 viruses	b) Hepatitis-B virus	
	c) Mycobacterium tuberculosis	d) All of the above	
269	. Agarose is extracted from		
	a) Sea weeds b) Blue-green algae	c) <i>Ephedra</i>	d) <i>Sargassam</i>
270	. Which one is a true statement regarding DNA polyn	merase used in PCR?	, ,
	a) It is used to ligate introduced DNA in recipient c	ell b) It serves as a selectal	ble marker
	c) It is isolated from a virus	d) It remains active at h	
271	DNA fragments generated by the restriction endon		= -
	a) Polymerase chain reaction	b) Electrophoresis	-
	c) Restriction mapping	d) Centrifugation	
272	. The two main techniques that gave birth to modern	, .	
	I. chemical engineering		
	II. genetic engineering		
	III. human genome engineering		
	IV. molecular biology		
	Choose the correct option		
	a) I and II b) I and III	c) II and IV	d) II and III
273	Stirred-tank bioreactors have been designed for	,	,
	a) Purification of the product		
	b) Addition of preservatives to the product		
	c) Availability of oxygen throughout the process		
	d) Ensuring anaerobic conditions in the culture ves	ssel	
274	. First biochemical to be produced commercially by		etic engineering is:
	a) Interferon b) Penicillin	c) Human insulin	
275	. Which is incorrect statement?	,	
	a) <i>Taq</i> DNA polymerase is important for PCR		
	b) <i>Taq</i> DNA polymerase is not thermostable		
	c) In PCR two nucleotide primers are used		
	d) <i>Taq</i> DNA polymerase, isolated from bacterium <i>T</i>	Thermus aquaticus	
276	A genetically engineered micro-organism used succ	-	n of oil spills is a species of:
	a) Trichoderma b) Xanthomonas	c) Bacillus	d) Pseudomonas
277	. There is a restriction endonuclease called <i>Eco</i> RI. W	•	•
	a) Coli b) Coelom	c) Coenzyme	d) Colon
278	. Which of the following would have the highest oxyg	•	
	a) A sparged stirred tank bioreactor being stirred a	=	
	b) A non-sparged stirred tank bioreactor being stir		
	c) A shake flask being mixed at 200 RPM		
	d) All of the above would have equivalent oxygen to	ransfer rate characteristics	S
279	Enzymes breaking nucleic acids into nucleotides ar		
	a) Hydrolases b) Amylases	c) Nucleic acidases	d) Nucleases
280	. Palaeontologists unearthed a human skull during ϵ	•	,
	attached to it. Only little DNA could be extracted	-	-
	analysed, the best way of getting sufficient amount	-	
	a) By hybridizing the DNA with a DNA probe		
	b) By subjecting the DNA to polymerase chain reac	tion	
	c) By subjecting the DNA to gel electrophoresis		

d) By treating the DNA with restriction endonucleases 281. Transgenic organisms are produced by: a) Deleting sex chromosomes b) Inducing gene mutations c) Introducing foreign genes d) Arresting spindle fibre formation 282. Manipulation of gene and genetic material by man is a fast emerging branch of science which started with the formation of recombinant DNA molecules. This branch of science is named as a) Recombinant DNA technology b) Genetic engineering c) DNA manipulation biotechnology d) All of the above 283. Ligases catalyse the formation of bonds between a) C = Cb) P = 0c) C - C d) H - H 284. The characteristics of a molecular probe are I. very long molecule II. double-stranded III. DNA or RNA IV. complementary to a part of desired gene The correct pair is b) II and III c) III and IV a) I and II d) IV and I 285. VNTR analysis involves a) Analyzing specific loci for two base repeating units usually less then 100 bp in size b) Analyzing specific loci for 2-4 bp repeating units c) PCR amplification of specific genes d) Cutting DNA with restriction enzyme and analyzing the banding pattern of fragments 286. Manipulation of DNA in genetic engineering became possible due to the discovery of a) Restriction endonuclease b) DNA ligase c) Transcriptase d) Primase 287. Study the given figure carefully and select the correct statements regarding this I. It represents typical agarose gel electrophoresis which showing differential migration of DNA fragments II. Lane 1 contains undigested DNA fragments III. Lanes 2 to 4 contains digested DNA fragment IV. Smallest DNA bands are present at (A) position and largest DNA bands are present at (B) position c) II and III a) I, II and III b) I, II and IV d) III and IV 288. Matching sequence of DNA between two evidences, one of the criminal with the suspect is known as: a) DNA fingerprinting b) DNA amplification d) DNA resolution c) Gene mapping 289. Alec Jeffreys developed the DNA fingerprinting technique. The probe he used was a) Ribozyme b) Sex chromosomes c) SNP d) VNTR 290. In addition to tag polymerase enzyme which other thermostable DNA polymerases have been isolated to be used in Polymerase Chain Reaction (PCR)? d) None of these a) *Vent* polymerase b) *Pfu* polymerase c) Both (a) and (b) 291. PCR proceeds in three distinct steps governed by temperature. They are in order of a) Denaturation, synthesis (polymerization), annealing b) Annealing, synthesis (polymerization), denaturation c) Synthesis (polymerization), annealing, denaturation d) Denaturation, annealing, synthesis (polymerization) 292. One of the following is transgenic of organisms: a) Holly sheep and Flavr savr tomato b) Holly sheep and Cotton Bt

c) Dolly sheep and Cotton Ct

- d) Flavr savr tomato and Cotton Bt
- 293. Name of the drug used in cancer treatment produced by using biotechnology is:

b) TSH

- c) Insulin
- d) Interferon

- 294. What is the function of Restriction endonuclease?
 - a) Restricts the synthesis of DNA inside the nucleus
 - b) Synthesizes DNA
 - c) Cuts the DNA molecule randomly
 - d) Cuts the DNA molecule at specific sites
- 295. I. Bacteriophages are ...A... nfectecting ...B....
 - II. ...C... are hybrid vectors derived from plasmids which contain or site of λ phage

A. B and C in above statements refers to

- Α

- a) Protozoa Bacteria Cosmid

b) Plasmid Virus Cosmid

- c) Bacteria Virus
- Cosmid

- d) Virus
 - Bacteria Cosmid
- 296. In gel electrophoresis, the separated bands of DNA are cut out and extracted from the gel piece. This step is called
 - a) Elution
- b) Origin replication
- c) Competency
- d) Transformation

- 297. Nif genes is a group of proteins:
 - a) 15 genes
- b) 15 nucleotides
- c) 15 proteins
- d) 10 genes
- 298. Identify the following diagrams *A* and *B* and select the correct option

- a) A-Simple stirred-tank bioreactor, B-Sparged stirred-tank bioreactor
- b) A-Sparged stirred-tank bioreactor, B-Complex stirred-tank bioreactor
- c) A-Sparged stirred-tank bioreactor, B-Simple stirred-tank bioreactor
- d) A-Simple stirred-tank bioreactor, B-Complex stirred-tank bioreactor
- 299. Genetic engineering is helpful in:
 - a) Gene regulation
- b) Gene translation
- c) Gene therapy
- d) Alcohol production
- 300. Significance of heat shock method in bacterial transformation is facilitate
 - a) Binding of DNA to the cell wall

- b) Uptake of DNA through membrane transport proteins
- c) Uptake of DNA through transient pores in the bacterial cell wall
- d) Expression of antibiotic resistance gene
- 301. A technique used to make numerous copies of a specific segment of DNA quickly and accurately:
 - a) Ligase chain reaction

b) Transcription

c) Polymerase chain reaction

- d) Translation
- 302. Two microbes found to be very useful in genetic engineering are:

	a) Diplococcus sp. and Pseudomo	onas sp.		
	b) Crown gall bacterium and Cae	norhabditis elegans		
	c) Escherichia coli and Agrobacte	erium tumefaciens		
	d) Vibrio cholerae and a tailed ba			
303.	Minisatellite or Variable Number		NTR) are used in	
		ne mapping	c) DNA fingerprinting	d) Restriction enzymes
304.	Having become an expert on gel		, , ,	•
-	would you find the smallest segn			
	a) Near the positive electrode, fa		e wells	
	b) Near the negative electrode, cl	-	e wens	
	c) Near the top, near the negative			
	d) Near the middle they tend to s	•	first few minutes	
305	Improvement of genotype of an o			
303.		ne handling	c) Tissue culture	d) Genetic engineering
206	The structure involved in genetic	· ·	c) rissue cuiture	u) defietic eligiliteering
300.	_		a) Voctor	d) Plasmid
207	-	ticodon	c) Vector	•
307.	In agarose gel electrophoresis, D			
200	a) Charge only b) Size	-	c) Charge to size ratio	d) All of these
308.	In gel electrophoresis, the sample	e DNA is cut into fra	=	
	a) Restriction endonucleases		b) Exonuclease	
	c) Endonuclease		d) Anhydro L-galactose	
309.	Molecular scissors, which cut DN	A at specific site:		
	a) Ligase		b) Cellulase	
	c) Pectinase		d) Polymerase	
310.	PCR stands for:			
	a) Polymerase Cyclic Reaction		b) Polymerase Chain Reac	
	c) Polyethyl Cytosine Reaction		d) Polymerization Chain R	eaction
311.	In case of polymerase chain react	tion, temperature, re	equired for the steps	
	A. Denaturation			
	B. Annealing			
	C. Extension			
	a) A-94°C, B-40°C, C-72°C		b) A-40°C, B-72°C, C-94°C	
	c) A-72°C, B-94°C, C-40°C		d) A-94°C, B-72°C, C-40°C	
312.	DNA can be introduced into any o	cell by:		
	a) Injection			
	b) Being complexed with calcium	ı salts		
	c) Being placed along with the ce	ell into a gene gun		
	d) Gel electrophoresis			
313.	An improved variety of transgen	ic basmati rice:		
	a) Gives high yield and is rich in	Vitamin A		
	b) Is completely resistant to all in	nsect pests and disea	ases of paddy	
	c) Gives high yield but has no cha	-		
	d) Does not require chemical fert		iormones	
314.	Which of the following organelles	_		
	a) Plastids b) Plas		c) Chloroplast	d) Mitochondria
315.	Human genome contains about:		, 1	,
	_	000 genes	c) 6 billion nucleotides	d) 6 billion genes
316	An artificial process of infecting of	=	=	,
		insduction	c) Transfection	d) Transgenic

	a) RNA Polymerase-RNA primer		b) Respiration-Lysosome	
	, r		, i J	

- c) Restriction enzyme-genetic engineering
- d) Central dogma-DNA structure
- 318. For transformation, microparticles coated with DNA are to be bombarded with gene gun are made up of:
 - a) Platinum or Zinc
- b) Silicon or Platinum
- c) Gold or Tungsten
- d) Silver or Platinum
- 319. You are attempting to introduce a gene that imparts larval moth resistance to bean plants. Which of the following vectors are you most likely to use?
 - a) Phage DNA
- b) Bacterial plasmid
- c) Ti plasmid
- d) Yeast plasmid
- 320. Simple stirred-tank bioreactor is given below. Identify A,B,C,D and E

A		В	B C D		D	E
a)	Motor	Foam braker	Sterile air		m for lization	Acid/Bas e of pH control

c)	Acid/	Motor	Foam	Sterile air	Steam for

d)	Sterile	Steam	Foam	Motor	Acid/Bas
-	air	for	braker		e of pH
		sterilize			control
		ation			

- 321. Protein engineering is used to study the proteins to compare the catalytic properties of:
 - a) Normal and mutated form of enzyme
- b) Normal form of enzyme

c) Mutated form of enzyme

- d) Normal and mutated form of proteins
- 322. Genes that are involved in turning on or off the transcription of a set of structural genes are called:
 - a) Polymorphic genes
- b) Operator genes
- c) Redundant genes
- d) Regulatory genes
- 323. The experimental manipulation of DNA of different species, producing recombination DNA is known as
 - a) Gel electrophoresis

b) Transformation

c) Genetic engineering

- d) Replication technology
- 324. Plasmid is used as carrier because:
 - a) It has both ends with replicating points
 - b) It has no free ends
 - c) It is circular DNA with a capacity of binding with equkaryotic DNA
 - d) All of the above
- 325. Which of the following statement is correct in the context of observing DNA separated by agarose gel electrophoresis?
 - a) DNA can be seen in visible light
 - b) DNA can be seen without staining in visible light
 - c) Ethidium bromide stained DNA can be seen in visible light
 - d) Ethidium bromide stained DNA can be seen under exposure to UV light
- 326. Nitrogen fixing genes are called:
 - a) 'Nif' genes
- b) Plasmid genes
- c) Leg genes
- d) Cos genes
- 327. The genetically-modified (GM) brinjal in India has been developed for:
 - a) Enhancing shelf life

b) Enhancing mineral content

c) Drought-resistance

- d) Insect-resistance
- 328. Variable number of tendem repeats (VTNRs) in the DNA molecule are highly useful in:
 - a) Monoclonal antibody production
- b) DNA fingerprinting

c) Recombinant DNA technology

- d) Stem cell culture
- 329. Protoplasts of two different species are fused in:
 - a) Clona propagation

b) Organography

c) Micropropagation

d) Somatic hybridization

b) Schleiden and Schwann

330. Identify the correct match for the given diagram

Apparatus function

a) Gene gun - Vectorless direct gene transfer

b) Electrophoresis - Differential migration of DNA fragments

c) Bioreactor - Raw materials are biologically converted into specific products

d) Respirometer - Finding out rate of respiration

331. DNA fingerprinting technique was first developed by:

a) Jeffreys, Wilson and Thein

c) Edward and Steptoe d) Boysen and Jensen

332. Using recombinant technology, genes from a donor cell can be transplanted into a bacterium for DNA replication and protein synthesis. The kinds of cells that can be used as a donor in this technology are

a) Bacteria b) Either yeast or bacteria

c) Eukaryotic cells d) Any kind of cell

333. Transformation is defined as the procedure by which a piece of ...A... is introduced into a ...B... host. Here A and B refers to

A B

a) RNA Virus b) DNA Bacteria c) RNA Bacteria d) DNA Virus

BIOTECHNOLOGY AND ITS APPLICATIONS

BIOLOGY

: HINTS AND SOLUTIONS :

2 **(b)**

Retroviruses in animals including humans are able to change normal cells into cancerous cell

4 (c)

pBR322 vector was the first artificial cloning vector constructed in 1977 by Boliver and Rodriquez. It is widely used in gene cloning experiments in pBR322

p – Denotes that it is plasmid

BR – stands for Boliver and Rodriquez who constructed this plasmid

322 is a number given to distinguish this plasmid from others developed in the same laboratory

5 **(a)**

Genetic engineering is defined as the modification of genetic information of living organism by direct manipulation of their DNA. Thus, a gene of known function (economic importance) can be transferred from its normal location into a cell *via* a suitable mobile genetic element called vector such as plasmid, phage, etc.

7 (a)

Recombinant DNA having integrated fragment of antibiotic resistant gene

8 (a)

True. In plants, the tumour inducing plasmid (T_i) of $\emph{Agrobacterium tumefaciens}$ is used as a cloning vector

9 **(c)**

Gene encoding resistance to antibiotics like ampicillin, chloramphenicol, tetracycline or Kanamycin, are useful selectable markers for *E.coli*. The normal *E.coli* cells do not carry resistance against any of these antibiotics

12 **(d)**

Proteins are removed by treatment with protease

13 (c

Plasmids, cosmids or bacteriophages can be used as vector in genetic engineering. Plasmids are most widely used circular, extrachromosomal DNA segments seen in the bacterial cells. They carry a foreign gene or desired gene to the host. The size of plasmids ranges from 1×10^6 to

 200×10^6 daltons

14 **(c)**

Both are true, *Ori* also controls the copy numbers of the linked DNA

If a foreign DNA ligates at the *Bam* HI site tetracycline resistance gene in the vector pBR322, the recombinant plasmid loses the tetracycline

18 **(d)**

After the formation of the product in the bioreactors, it undergoes through some processes before a finished product to be ready for marketing. *The processes include* (i) separation and (ii) purification of product which are collectively called the downstream processing The product is subjected to quality control testing and kept in suitable preservatives. If drugs are to be manufactured such formulation has to undergo through clinical trials. A proper quality control testing for each product is also needed. The downstream processing and quality control test are different from product to product

19 **(a**)

Endonucleases are enzymes that produce internal cuts called cleavage DNA molecule. A class of endonucleases cleavage DNA only within or near those sites which have specific base sequences, such endonucleases are known as restriction endonucleases and sites recognized by them are called recognition sites. Restriction endonucleases have major role in genetic engineering

20 **(b)**

Plasmid is an extrachromosomal genetic of DNA that is capable of replicating independently of host chromosome. It forms the basis of many cloning vectors used in genetic engineering

21 **(b)**

PCR was discovered by Kary Mullis. In Polymerase Chain Reaction (PCR), a segment of DNA is amplified. *Taq* DNA polymerase enzyme is used PCR, this enzyme is temperature resistant

22 **(a)**

A-Taq polymerase, B-Denaturation (air), C-Prime

23 **(d)**

Bioreactors (fermenters) are considered as vessel in which raw material are biologically converted into specific products by microbes, plant and animal cells and/or their enzymes

24 **(a)**

By using PCR phenylketonuria, muscular cystrophy, sickle-cell anaemia, hepatitis, chlamydia and tuberculosis can be diagnosed

26 **(a)**

Primers are small chemically synthesized oligonucleotides of about 10-18 nucleotides long that are complementary to the sequences present at the 3' ends of the target DNA segment

27 **(b)**

Shotgun cloning involves cutting the DNA of the entire genome into pieces with restriction enzyme, inserting these pieces or fragments into bacteria or yeast with plasmids or viruses and allowing the organism to reproduce making copies or clones of the DNA fragments

28 **(d)**

The Polymerase Chain Reaction or PCR, as it is commonly called, was originally invented by Kary Mulllis in 1985. Kary Mulllis shared the Nobel Prize with Michael Smith in Chemistry in 1993. PCR is best defined as the DNA replication *in vitro*. A single PCR amplification cycle involves three basis steps; denaturation, annealing and extension (polymerization)

30 **(a)**

True, *Ori* is a DNA sequence that is responsible for initiating replication. Any piece of DNA, which linked to this sequence can replicated with in the host cells

31 **(a)**

True. Plasmids are autonomously replicating circular extra-chromosomal DNA

33 (d)

PCR is carried out in the following three steps Denaturation, Annealing and Extension

37 **(d**)

Plasmid which is extra chromosomal DNA molecule and help in gene cloning

38 **(d**)

A restriction fragment containing a specific gene of interest can be identified by gel electrophoresis followed by transferring of DNA to a membrane as a solid support matrix using a procedure called a Southern blot

39 **(a)**

Protection of host DNA from the action of restriction endonuclease by adding methyl group to one or two bases usually with in the sequence recognized by restriction enzyme

40 **(d)**

Single stranded DNA molecules that can bind to and be used to detect other DNA molecule are called probes

42 **(a)**

Principle of PCR The purpose of a PCR (Polymerase Chain Reaction) is to make a huge number of copies of a gene. This is necessary to have enough starting template for sequencing There are three major steps in a PCR, which are repeated for 30 or 40 cycles. This is done on an automated cyclers, which can heat and cool the tubes with the reaction mixture in a very short time

- (i) **Denaturation at 95**°C During the denaturation, the double-strand melts open to single-stranded DNA, all enzymatic reactions stop (for example : the extension from a previous cycle)
- (ii) Annealing at 54°C The primers are jiggling around, caused by the Brownian motion. Ionic bonds are constantly formed and broken between the single-stranded primer and the single-stranded template. The more stable bounds last a little bit longer (primers that fit exactly) and on that little piece of double-stranded DNA (template and primer), the polymerase can attach and starts copying the template. Once there are a few bases built in, the ionic bond is so strong between the template and the primer, that it does not break anymore
- (iii) Extension at 72°C This is the ideal working temperature for the polymerase. The primers, where there are a few bases built in, a already have a stronger ionic attraction to the template than the forces breaking these attractions. Primers, that are on positions with no exact match, get loose again (because of the higher temperature) and don't give an extension of the fragament

The bases (complementary to the template) are coupled to the primer on the 3' side (the polymerase adds *a*NTPs from 5' to 3', reading the template from 3' to 5' side, bases are added complementary to the template)

43 **(c)**

The controlled use of biological agents, such as microorganism, plants or animal cell, for

beneficial use is called biotechnology. This technology involves cutting and pasting of desired DNA fragments into the specified hosts for the benefits of human beings

51 **(a)**

Eco RI.

(A) Eco RI

Pvu I

Pst I

Amp^R (D)

pBR322

ori (e)

rop

Pvu II

52 **(a)**

Microinjection DNA is directly injected into plant protoplasts or cells (specifically into the nucleus or cytoplasm) using fine tipped (0.5-1.0 micrometer diameter) glass needle or micropipette. This method of gene transfer is used to introduce DNA into large cells such as oocytes, eggs, and the cells of early embryo

Electroporation It involves a pulse of high voltage applied to protoplasts/cells/tissues to make transient (temporory) pores in the plasma membranes which facilitates the uptake of foreign DNA

The cells are place in a solution containing DNA and subjected to electrical shock to cause holes in the membranes. The foreign DNA fragments enter through the holes into the cytoplasm and then to nucleus

Chemical Mediated Gene Transfer Chemicals like Polyethylene Glycol (PEG) and sulphate induce DNA uptake into plant protoplasts. Calcium phosphate is also used to transfer DNA into cultured cells

55 **(d)**

Polyethylene glycol method is used for gene transfer without a vector. It is a chemical method for direct gene transfer to protoplast

56 **(c**)

Restriction endonucleases and ligase are commonly used enzymes in genetic engineeering

57 **(c**)

DNA fingerprinting is a modern technique that compares sets of DNA by locating identical sequences of nucleotides. It is oftening used to solve many mysteries involving murders,

robberies and rapes

8 **(d)**

Genetic engineering is a branch of biotechnology, which deals with the manipulation of genetic material by man. The technique of genetic engineering includes

- (i) formation of 'recombinant DNA'
- (ii) use of gene cloning
- (iii) gene transfer
- pBR 322 was the first artificial cloning vector constructed in 1977 by Boliver and Rodriguer. It is widely used in gene cloning experiments
- 2. Restriction enzymes belongs to a class of enzymes called nucleases

60 **(c)**

A – Key Mullis

B - 1985

C - 1993

61 **(b)**

Cutting of piece of DNA from a plasmid was done with the help of restriction enzyme, popularly known as molecular scissors

62 **(c)**

Different kinds of specific enzymes are used in genetic engineering, *e.g.*, cleaving enzymes → These enzymes are used to break DNA molecules *They are of three types*

- (i) Exonucleases
- (ii) Endonucleases
- (iii) Restriction endonucleases

63 **(d)**

Components of a bioreactors

An agitator system

An oxygen delivery system

Foam control system

Temperature control system

pH control system

sampling ports to withdraw culture periodically

65 **(c)**Both are true

66 **(a)**

A-plasmid, B-Boliver, C-Rodriquez. pBR322 vector was the first artificial cloning vector constructed in 1977 by Boliver and Rodriquez. It is widely used in gene cloning experiments in pBR322

p – Denotes that it is plasmid

BR - stands for Boliver and Rodriquez who

constructed this plasmid 322 is a number given to distinguish this plasmid from others developed in the same laboratory

67 **(c)**

DNA fingerprinting is a technique to identify a person on the basis of person's DNA specificity. The technique is based upon the fact that the DNA constitution of an individual carries some specific sequence of nucleotides, which do not carry any information for protein synthesis

From the given options, leucocytes are to be used for identifying the criminal because they are nucleotide, whereas erythrocytes are enucleated

70 (a)

The basic requirements of a PCR reaction are the following

DNA Template Any source that contains one or more target DNA molecules to be amplified can be taken as template

Two Nucleotide Primers Primers, which are oligonucleotides, that hybridise to the target DNA region, one to each strand of the double helix **Enzyme** *Taq* polymerase and *vent* polymerase

72 **(d)**

Circular plasmid DNA which is used as a vector, can be cleaved at one site with the help of enzyme to give a linear DNA molecule. A foreign DNA segment can now be inserted, by joining the ends of broken circular DNA to the two ends of foreign DNA, thus regenerating a bigger circular DNA molecule that can now be separated by gel electrophoresis on the basis of its size Bacteriophages provide another source of cloning vectors. Since, usually, a phage has a linear DNA molecule, a single break will generate two fragments, which are later joined together with foreign DNA to generate a chimeric phage particle

73 **(a)**

Genetic engineering is defined as the modification of genetic information of living organisms by direct manipulation of their DNA

Thus, a gene of known function (or economic importance) can be transferred from its normal location into a cell *via* a suitable mobile genetic element called vector such as plasmid phage, etc.

74 **(a)**

Thermostable enzymes 'Taq and Vent' isolated from thermophilic bacteria are DNA polymerase Taq polymerase, isolated from a Thermophilic bacterium, Thermus aquaticus and vent polymerase, isolated from a thermophilic

bacterium Thermococcus litoralis

75 **(b)**

Due to chlorophenicol resistance gene, one is able to select a transformed cell in the presence of chloramphenicol. The chloramphenicol resistance gene in this case is called selectable marker

76 **(a)**

The restriction endonuclease *Eco* RI is obtained from *Esherichia coli* RY 13. The recognition sequence for this is GAATTC, CTTAAG

77 **(a)**

Autonomously replicating circular extrachromosomal DNA.

Manipulation of gene and genetic material by man is a fast emerging branch of science, which started with the formation of recombinant DNA molecule. This branch of science is named as recombinant DNA technology, genetic engineering and DNA manipulation technology, genetic engineering and DNA manipulation technology. This technology involves cutting and pasting of desired DNA fragments into the specified hosts for the benefits of human beings

78 **(d)**

The polymerase chain reaction is a technique that is used for *in vitro* replication of specific DNA sequence using thermostable DNA polymerase. The polymerase chain reaction or PCR, was originally invented by Kary Mullis in 1985. Kary Mullis shared the Nobel Prize with Michael Smith in chemistry in 1993

86 **(b)**

The Polymerase Chain Reaction (PCR) is a technique by which small samples of DNA can be quickly amplified. The repeated amplification is achieved by the use of thermostable DNA polymerase (*i.e., taq* polymerase isolated from a bacterium, *Thermus aquaticus*) which remain active during the high temperature induced denaturation of double-stranded DNA

88 **(b)**

Exonucleases remove nucleotides from the terminal ends (either 5' or 3') of DNA in one strand of duplex

90 **(d)**

PCR is a technique of synthesizing multiple copies of the desired gene or (DNA) *in vitro. The basic requirement of PCR* are DNA template, two nucleotide primers and enzyme (DNA polymerase)

91 **(d)**

Agrobacterium tumefaciens (soil inhabiting plant bacterium) is a pathogen of several dicot plants. It delivers a piece of DNA known as 'T-DNA' in the Ti-plasmid which transforms normal plant cells into tumour cells to produce chemicals against pathogens

92 **(a)**

Restriction endonuclease recognize a specific DNA base sequence (recognition sequence, recognisation site, restriction sequence or restriction site having palindromic sequence) and 114 (d) cleaves both the strands of DNA at or near that site. The enzyme cuts the DNA, generating restriction fragments with overhanging ends or blunt ends

95 **(a)**

Agrobacterium tumefaciens (updated scientific name *Rhozobium radiobacter*) is the casual agent of crown gall disease (the formation on tumour) in over 140 species of dicot. It is a rod-shaped, Gram negative, soil bacterium (Smith, et. al 1907). Symptoms are caused by the insertion of a small segment of DNA, known as T-DNA (transfer DNA) into the plant cell, which is incorporated at a semi-random location into the plant genome

96 **(a)**

True, the polymerase chain reaction is a reaction in which amplification of specific DNA sequences is carried out in vitro

99 (d)

Restriction enzyme are known as molecular knives or molecular scissors and are used to cut DNA at specific sites of DNA. These were first discovered by Smith, Nathan and Arber

101 (d)

Small volume cultures are usually employed in laboratories for research and production of less quantities of products. e.g., in shake flasks. However, large scale production of the products is carried out in 'bioreactor' Bioreactors are large vessels (having a volume of 100 to 1000 L) which are used for biological conversion of raw materials into specific products. The most commonly used bioreactors are of stirring type

102 **(c)**

The term 'Biotechnology' was given in 1917 by a Hungarian Engineer, Karl Erkey, to describe a process or large scale production of pigs

107 **(b)**

Agrobacterium tumefaciens delivers a piece of

DNA known as 'T-DNA' in the Ti-plasmid which transforms normal plant cells into tumour cells to produce chemical against pathogens

110 **(b)**

Kary Mullis

Gene encoding resistance to antibiotics like ampicillin, chloramphenicol, tetracycline or Kanamycin, are useful selectable markers for *E.coli.* The normal *E.coli* cells do not carry resistance against any of these antibiotics

Ti-plasmid is found in *Agrobacterium* tumefaciens, which produces crown gall (tomour) in a large number of dicot species. *A. tumefaciens* is a Gram negative soil bacterium that infects a wide range of plants and causes crown galls

115 (c)

The science of recombinant technology took birth when Cohen and Boyer (1972) were able to introduce a piece of antibiotic resistance gene containing foreign DNA into plasmid of Salmonella typhimurium. This modified plasmid was them inserted into E. coli to get clones of recombinant DNA. Thus, Cohen and Boyer discovered recombinant technology

116 **(c)**

In recombinant DNA technology, a desired segment of DNA or a gene is made to combine with the DNA of an organism where it will multiply and produce it copies. Plasmids and viruses are the most commonly used cloning vectors in recombinant DNA technology

119 (c)

Selectable marker helps to select the host cells which contain the vector and eliminate the nontransformants. Genes encoding resistance to antibiotics like ampicillin, chloramphenicol, tetracycline or kanamycin are useful selectable markers of *E.coli*. The normal *E.coli* cells do not carry resistance against any of these antibiotics

122 **(c)**

Herbert Boyer discovered that restriction enzymes have the capability of cutting DNA strands in a particular fashion, which left what has became known as sticky ends on the strands

123 **(b)**

A Southern blot.

A restriction fragment containing a specific gene of interest can be identified by gel electrophoresis followed by transferring of DNA to a membrane as a solid support matrix using a procedure called a

Southern blot

124 **(d)**

In biolistic or gene gun method, cells are a high velocity micro-particles of gold or tungsten coated with DNA in plants. Important crop plants like maize, rice and wheat have now been transformed by this method

125 (a)

Electrophoresis.

A molecule of DNA can be cut into fragments by the enzyme restriction endonucleases. These fragments of DNA can be separated by a technique of gel electrophoresis. In this process the smallest | 142 (c) segment of DNA travel towards anode (+ ve electrode), farthest away from the wells

130 (a)

RNA is removed by treatment with ribonuclease

132 **(d)**

All statements are correct

Restriction Enzymes	Source	Recognition Sequence and Site of Cleavage	Product
Eco RI	Escherichia coli RY 13	5'-G-A-A-T-T-C-3' 3'-C-T-T-A-A-G-5'	G A-A-T-T-C

133 **(b)**

During annealing two oligonucleotide primers hybridise to each of single stranded template DNA in presence of excess of synthetic oligonucleotides

136 **(d)**

In gel electrophoresis a molecule of DNA can be cut into fragments by the enzyme restriction endonuclease. DNA fragments move towards the anode according to their molecular size through the agarose gel

The separated DNA fragments can be observed only after staining them with a solution of ethidium bromide. The bright orange coloured bands of DNA can be seen only under UV light. These bands of DNA fragments are cut out from the gel and extracted by using convenient technique. This step is called elution

139 **(d)**

Microorganisms can be grown in the bioreactors by support growth system and suspended growth system

141 **(a)**

Escherichia coli and Agrobacterium tumefaciens are the microbes found to be very useful in genetic engineering. E.coli is a motile, Gram negative, rod-shaped bacterium which is a normal inhabitant of human colon. It is most extensively used in bacterial genetic and molecular biology Agrobacterium tumefaciens is a soil bacterium. It has Ti-plasmid (tumour inducing plasmid) and it can be used for the transfer of a desired gene in dicot plants

pUC 18 is a plasmid cloning vector commonly used with E. coli. The vector length is 2686 bp and is isolated from *E. coli* strain DH5 α by standard procedures

143 **(b)**

A - Vector; B-DNA

144 **(b)**

The probes used for DNA fingerprinting are usually prepared from minisatellite or microsatellite DNA

145 (d)

In recent times, PCR is being used in the detection of HIV (virus of AIDS) mutation are related to genetic disease. By using PCR phenylketonuria, muscular dystrophy, sickle-cell anaemia, hepatitis, chlamydia and tuberculosis can be diagnosed. PCR is also used in DNA fingerprinting

147 (c)

Ti-plasmid is a plasmid present in *Agrobacterium* tumefaciens. It is used in genetic engineering in plants, e. g., as a vector in gene transfer to dicot plants

148 (a)

The role of DNA ligase in the construction of a recombinant DNA molecule is formation of phosphodiester bond between two DNA fragments. DNA ligase help in sealing gaps in DNA fragments

Therefore, they act as a molecular glue. In 1969 Har Govind Khorana discovered DNA ligase in T₄bacteriophage

153 **(b)**

In gene gun or biolistic method tungsten or gold particles, coated with foreign DNA are bombarded into target cells at a very high velocity Although this method is suitable for plants yet this technique is also used to insert genes into animal that promote tissue repair into cells

(particularly cancer of mouth) near wounds

154 **(c)**

The final step in PCR is extension (polymerization), where in *Taq* DNA polymerase synthesizes the DNA region between the primers using deoxynucleotide triphosphates and Mg²⁺. It 163 (c) means the primers are extended towards each other so that the DNA segment lying between the two primer is copied. The optimum temperature for this polymerization step is 72°C *Taq* polymerase is thermostable enzyme, isolated from Thermophilic bacterium, Thermus aquaticus

155 (a)

EFB - European Federation of Biotechnology A definition of biotechnology which covers both traditional views and modern molecular biotechnology has been given by European Federation of Biotechnology. According to EFB "Biotechnology is the integrated use of biochemistry, microbiology and engineering sciences in order to achieve technological application of the capabilities of microorganisms, cultured tissues/cells and part there of"

156 (a)

A technique developed by EM Southern in 1975 for detection of a specific DNA sequences (gene or other) in a large, complex sample of DNA (e.g., cellular DNA). It is also used to determine the molecular weight of a restriction fragment and to measure relative amounts in different sample **Uses** Southern blots are used in gene discovery and mapping, evolution and development studies, diagnostics and forensics In regards to genetically modified organisms, Southern blotting is used as a definitive test to ensure that a particular section of DNA of known genetic sequence has been successfully incorporated into the genome of the host organism

157 **(b)**

Cry I endotoxins obtained from Bacillus thuringiensis are effective against bollworm larvae

158 (a)

In the naming of restriction enzymes the first letter is derived from genus name and next two letters from the species name of the prokaryotic cell from where the enzymes are extracted

159 (d)

A molecule of DNA can be cut into fragments by

the enzyme restriction endonucleases. These fragments of DNA can be separated by a technique of gel electrophoresis. It is a technique used for the separation of substances of different ionic properties

During extension, the enzymes *Taq* polymerase synthesizes the DNA segment between the primers. The two primers extend towards each other in order to copy the DNA segment typing between the two primers This step requires presence of deoxynucleoside triphosphate (dNTPs) and Mg²⁺ and occurs at 72°C

164 (c)

Both are true in the process for the isolation of DNA, after several treatments the purified DNA is precipitated by adding chilled ethanol. The bacterial/plant, animal cell is broken down by enzymes to release DNA, along with RNA, proteins, polysaccharide and lipids

165 (c)

Bioreactors are vessels of large volumes (100-1000 litres) in which raw materials are biologically converted into specific products. It provides all the optimal conditions for achieving the desired product by providing optimal growth conditions like temperature, pH, substrate, salts vitamins and oxygen. Stirred-tank bioreactors are commonly used bioreactors. There are cylindrical with curved base to facilitate proper mixing of the contents. The stirrer mixes the contents and makes oxygen available throughout the bioreactor

166 (a)

Thermus aquaticus.

DNA polymerase which is stable at high temperature (>90°C) is required to carry out the synthesis of new DNA. The DNA polymerase like *Taq* polymerase is generally used in PCR reactions which is isolated from a bacterium Thermus aquaticus

169 (c)

The first restriction endonuclease type II was isolated by Smith, Wilcox and Kelley from Haemophilus influenza bacterium. It was formed to cut DNA molecules at a particular point of recognizing a specific sequence of six base pairs, known as the recognition sequence

170 **(b)**

In gel electrophoresis, the separated DNA

fragments are visualized after staining the DNA with ethidium bromide followed by exposure to UV radiation

173 **(b)**

In gel electrophoresis a molecule of DNA can be cut into fragments by the enzyme restriction endonuclease. DNA fragments move towards the anode according to their molecular size through the agarose gel

The separated DNA fragments can be observed only after staining them with a solution of ethidium bromide. The bright orange coloured bands of DNA can be seen only under UV light. These bands of DNA fragments are cut out from the gel and extracted by using convenient technique. This step is called elution

175 (a)

DNA polymerase which is stable at high temperature (>90°C) is required to carry out the synthesis of new DNA. The DNA polymerase like Taq polymerase is generally used in PCR reactions which is isolated from a bacterium *Thermus aquaticus*

176 (a)

Most sensitive technique to detect malignant cell in non-hodgkins lymphoma is polymerase chain reaction. In recent times, PCR is being used in the detection of HIV (Virus of AIDS)

179 (c)

The Pribnow box (also known as the Pribnow – Schaller box) is the sequence TATAAT of six nucleotides that is an essential part of a promoter site on DNA for transcription to occur in bacteria

187 (a)

Gene gun method was first developed by Prof. Stanford and coworkers at Cornell University, USA in 1987. This method is used to introduce foreign DNA into host cell

188 **(c)**

During extension, the enzyme DNA polymerase synthesizes the DNA segment between the primers. DNA polymerase is a heat stable enzyme

191 **(c)**

After the formation of the product in the bioreactors, it undergoes through some processes before a finished product to be ready for marketing. The processes include (i) separation and (ii) purification of products, which are collectively called the downstream processing

192 (a)

The stirred-tank bioreactor is well suited for

large-scale production of protein of enzyme by using microbial plant/animal/human cells

193 (a)

A-DNA is vector/plasmid DNA and B-is foreign DNA.

C-The restriction enzyme that recognizes this palindrome-*Eco* RI

D-The enzyme that can link these two DNA fragment-DNA ligase

194 (c)

Restriction endonuclease was isolated for the first time by W Arber in 1962 in bacteria. They are called molecular scissors or biological scissors. In 1978 Arber, Smith and Nathan were awarded the Nobal Prize for the discovery of restriction endonuclease

195 **(b)**

In genetic engineering *r*DNA technology is applied to several biotechnological processes for obtaining particular biochemical improvement of genetic make up of an organism and fighting genetic defects

197 (d)

Primer and DNA polymerase.

PCR is a technique of synthesizing multiple copies of the desired gene or (DNA) *in vitro. The basic requirement of PCR* are DNA template, two nucleotide primers and enzyme (DNA polymerase)

198 **(b)**

An antibiotics resistance gene in a vector usually helps in the selection of transformed cell

200 (c)

Bioreactors are considered as vessels in which raw materials are biologically converted into specific products by microbes, plant and animal cells and or their enzymes. Small volume cultures can not give large quantities of the products. Large scale production (100-1000 L) of the products is carried out in bioreactors. A bioreactor provides the optimal conditions for obtaining the desired product by providing optimum growth conditions such as temperature, pH, substrate, vitamins, oxygen and salts. In the sparged stirred tank bioreactor, sterile air bubbles are sparged. The surface area for oxygen transfer is increased

203 (a)

Vent polymerase enzyme used in PCR is isolated from *Thermococcus litoralis*

211 **(b)**

A stirred-tank bioreactor is more advantageous, than shake flasks. It has an agitator system to mix the contents properly, an oxygen delivery system to make availability of oxygen, a foam control system, a temperature control system, a pH control system and a sampling port to withdraw the small volumes of the culture periodically

212 **(b)**

During gene cloning plasmid is called gene taxi. Molecular biologists add desired gene desired gene to plasmids, then insert the new plasmid with the added gene into a living bacterium

214 **(c)**

Both are true. Copy number is defined as the number of copies of vectors present in a cell. It varies from 1-100 copies per cell

219 (d)

Availability of thermostable DNA polymerase. DNA polymerase which is stable at high temperature (>90°C) is required to carry out the synthesis of new DNA. The DNA polymerase like *Taq* polymerase is generally used in PCR reactions 248 (a) which is isolated from a bacterium *Thermus* aquaticus

221 **(c)**

Stanley Cohen and Herbert Boyer generated first recombinant DNA molecule by combining a gene from a bacterium with plasmid of *Escherichia coli*

230 **(c)**

Thermophilic bacterium.

Thermostable enzymes 'Tag and Vent'isolated from thermophilic bacteria are DNA polymerase Taq polymerase, isolated from a Thermophilic bacterium, Thermus aquaticus and vent polymerase, isolated from a thermophilic bacterium Thermococcus litoralis

232 **(b)**

Agrobacterium tumefaciens is used as a best genetic vector in plants

233 **(d)**

Plants in comparison to animals are more rapidly manipulated by genetic engineering reasons are

- (i) Totipotency (having the ability to differentiate into all cell types) shown by plant cells
- (ii) Single somatic cell can regenerate a whole plant body
- (iii) Genetic engineering is supplemented with plant tissue culture techniques

237 **(b)**

Vector is a plasmid or virus DNA used to introduce genes into a host cell, where the genes may be amplified (gene cloning) or otherwise manipulated

240 (a)

Digestion with restriction enzyme

Electrophoresis

Ethidium bromide

Radioactive probe

X-ray film

241 (d)

 amp^{R} (amplification resistance gene) and tet^{R} (tetracycline resistance gene) are antibiotic resistance genes

244 (d)

Restriction endonucleases cleave DNA molecules only at specific nucleotide sequence called restriction sites. DNA ligase enzymes is used to joins bits of DNA

Mobile genetic element is broadly any genetic element capable of moving itself, with or without duplication, from one site in a genome to another. Mobile genetic elements include plasmids, viruses, transposable genetic elements (transposons), short interspread elements, pathogenicity islands and so on. The term 'transposon' was introduced RW Hedges and AE Jacob in 1974, 'controlling elements' or jumping genes, discovered by Barbara McClintock (1950) in maize

251 **(b)**

Special sequence in the DNA recognized by restriction endonuclease is called palindromic nucleotide sequence.

Restriction endonuclease recognizes palindromic sequences in DNA and cuts them

The palindromes in DNA are base pair sequences that are the same when read forward (left to right) or backward (right to left) from a central axis of symmetry

For example

(i) 5' - G A A T T C - 3'

3' - C T T A A G - 5'

(ii) 5' - G G A T C C -3'

3' - C C T A G G -5'

253 **(b)**

Identification of DNA with desirable gene

1

Introduction of DNA into host to form recombinant DNA

 \downarrow

Maintenance of DNA in host and gene cloning

 \downarrow

Gene transfer

254 **(b)**

Recombinant DNA technology involved the following steps

- (i) Isolation of DNA
- (ii) Fragmentation of DNA by restriction endonucleases
- (iii) Isolation of a desired DNA fragment
- (iv) Amplification of the gene of interest
- (v) Ligation of the DNA fragment into a vector
- (vi) Insertion of recombinant DNA into the host
- (vii) Culturing the host cells on a suitable medium at a large scale
- (viii) Extraction of the desired gene product
- (ix) Downstream processing of the products as finished product, ready for marketing

258 **(c)**

A - Competency

B - Calcium

C - microinjection method

262 **(a)**

The most important feature in a plasmid to be used as a vector is origin of replication (*Ori*). Origin of replication is a specific sequence of DNA bases which is responsible for initiating replication. A prokaryotic DNA has a single origin of replication while eukaryotic DNA may have more than one origin of replication

263 **(c)**

DNA gyrase, the enzyme that participates in the process of DNA replication is a type of DNA topoisomerase

265 **(d)**

Three types of 'biological tool' are used in the formation of recombinant DNA

- (ii) Cloning vectors (vehicle vectors)
- (iii)Complementary host (for transformation with recombinant DNA)

268 (d)

In recent times PCR is being used in the detection of HIV (Virus of AIDS). By using PCR phenylketonuria, muscular dystrophy, sickle-cell anaemia, hepatitis, chlamydia and tuberculosis also can be diagnosed

269 (a)

Agarose is extracted from sea weeds. It is a polysaccharide. In gel electrophoresis, DNA fragments separate according to size through the pores of agarose gel

270 (d)

DNA polymerase remains active at high temperature. Usually *Taq* DNA polymerase, isolated from a thermophilic bacterium *Thermus aquaticus*, is used in most of the cases

272 (a)

The science of biotechnology is based mainly on two core technologies

- (i) **Genetic engineering**, which is the manipulation of genes by man. It includes techniques to alter the nature of genetic material (DNA and RNA), to introduce these into host organisms and thus, change the phenotype of the host organism
- (ii) **Biochemical engineering**, *i.e.*, processes that help the growth of desired microbe/eukaryotic cell in large quantities in a sterile medium for the manufacture and multiplication of biotechnological product

273 **(c)**

Each bioreactor has a cylindrical stirred-tank to facilitate the mixing of contents. The stirrer provides facility of mixing the contents as well as availability of oxygen throughout the process

275 **(b)**

Taq DNA polymerase is a thermostable enzyme, isolated from a *Thermophilic bacterium*, *Thermus*

aquaticus

278 (a)

A sparged stirred-tank bioreactor being stirred at 200 RPM

280 **(b)**

The Polymerase Chain Reaction (PCR) is a technique by which small samples DNA can be quickly amplified. Starting with only one gene sized pieces of DNA, this technique is used to make literally billions of copies in only a few hours

283 **(b)**

Ligase catalyse the formation of bonds between P = 0

284 (c)

A probe is radioactively labelled (P³²) nucleic acid (20-40 nucleotide long) with a short sequence complementary to at least one part of the desired DNA gene

285 (d)

VNTRs were an important sources of RFLP genetic markers used in linkage analysis of genomes. VNTRs have become essential to forensic crime investigations, *via* DNA fingerprinting

286 (a)

Isolation of restriction endonucleases by **Nathans** and **Smith** (1970) made it possible to cut DNA at specific sites. Restriction enzyme can cut both strains of DNA when foreign nucleotides are introduced in the cell. They cleave DNA to generate a nick with a 5' phosphoryl and 3' hydroxyl terminus

287 (a)

Largest DNA bands will be at (A) and smallest DNA bands will be at (B) because in this DNA is move according to their size in agarose small DNA fragment will have small resistant so this fragment move to long distance as compared to large DNA fragment

289 **(d)**

The technique of fingerprinting was initially developed by Alec Jeffreys. He used a satellite DNA as probe that shows very high degree of polymorphism. It was called as Variable Number of Tendem Repeats (VNTRs)

290 **(c)**

Vent polymerase and *pfu* polymerase both

291 (d)

A single PCR amplification cycle involves three

basic steps; denaturation, annealing and extension (polymerization)

Denaturation - Melting of target DNA

Annealing – Join

Extension - Polymerisation

295 (c)

A-Bacteria, B-Virus, C-Cosmid

296 (a)

The DNA fragments are seen as orange coloured bands. The separated bands of DNA are cut out and extracted from the gel piece. This step is called elution

298 (a)

Simple stirred-tank bioreactor, sparged stirred-tank.

A-Simple stirred-tank bioreactor for continuous culture.

B-Sparged stirred-tank bioreactor through, which sterile (free from any germs) air bubbles are sparged

Bioreactor (fermenters) Bioreactors are considered as vessels in which raw materials are biologically converted into specific products by microbes, plant and animal cells and/or their enzymes. Small volume cultures cannot give large quantities of the products. Large scale production (100-1000 L) of the products in carried out in **bioreactors.** A bioreactor provides the optimal condition for obtaining the desired product by providing optimum growth conditions such as temperature, Ph, substrate, vitamins, oxygen and salts

Types of Bioreactors The most commonly used

bioreactors are of **stirring type**. Stirring type bioreactors are (i) **Simple stirredtank bioreactors** and (ii) **Sparged stirred-tank bioreactor** as shown in figure. In the sparged stirred-tank bioreactor, sterile air bubbles are sparged. The surface area for oxygen transfer is increased

300 (c)

DNA being a hydrophilic molecule can not pass through cell membranes. Therefore, the bacteria should be made competent to accept the DNA molecule

In this case the cell is treated with specific concentration of a divalent cation such as calcium to increase pore size in cell wall

The cells are incubated with recombinant DNA on ice, followed by placing them briefly at 42°C and them putting it back on ice. This is called heat shock treatment. The bacteria now takes up the recombinant DNA

303 (c)

DNA fingerprinting technique is very useful in solving disputed parentage cases and forensic cases. DNA fingerprinting are obtained from RFLP and VNTR (satellite DNA) analysis of blood, hair or other material found the place of crime

304 **(a)**

A molecule of DNA can be cut into fragments by the enzyme restriction endonucleases. These fragments of DNA can be separated by a technique of gel electrophoresis. In this process the smallest segment of DNA travel towards anode (+ ve electrode), farthest away from the wells

306 (d)

The structure involved in genetic engineering is plasmid. Plasmids were discovered by William Hays and Joshua Lederberg (1952). These are extrachromosomal, self-replicating usually circular, double-stranded DNA molecules found naturally in many bacteria and also in some yeast

307 **(b)**

After the cutting of DNA by restriction enzymes fragments of DNA are formed. Separation of DNA fragments according to their size or length is done by a technique called gel electrophoresis developed by **A Tiselius** in 1937

308 (a)

In gel electrophoresis, the sample DNA is cut into fragments by restriction endonucleases

311 (a)

A-Denaturation - 94°C B-Annealing - 40° - 60°C C-Extension - 72°C

323 (c)

Genetic engineering

325 (d)

The separated DNA fragments can be seen only after staining the DNA with a compound known as ethidium bromide (E+Br) followed by exposure to UV radiation as bright orange coloured bands

330 (c)

A-Simple stirred-tank bioreactor for continuous culture.

B-Sparged stirred-tank bioreactor through, which sterile (free from any germs) air bubbles are sparged

Bioreactor (fermenters) Bioreactors are considered as vessels in which raw materials are biologically converted into specific products by microbes, plant and animal cells and/or their enzymes. Small volume cultures cannot give large quantities of the products. Large scale production (100-1000 L) of the products in carried out in **bioreactors.** A bioreactor provides the optimal condition for obtaining the desired product by providing optimum growth conditions such as temperature, Ph, substrate, vitamins, oxygen and salts

Types of Bioreactors The most commonly used

bioreactors are of **stirring type**. Stirring type bioreactors are (i) Simple stirredtank bioreactors | 333 (b) and (ii) Sparged stirred-tank bioreactor as shown in figure. In the sparged stirred-tank bioreactor, sterile air bubbles are sparged. The surface area for oxygen transfer is increased

332 **(d)**

A variety of cell types are used as a donor in

recombinant DNA technology

A-DNA; B-Bacteria
